**Distributed Systems** George F. Coulouris, Jean Dollimore, Tim Kindberg, 2005 Up to date coverage of the latest development in this fast moving area including the debate between components and web services as the way for the industry to go increased emphasis on security and the arrival of ubiquitous computing in the form of among other things The Grid

*Progress in Distributed Operating Systems and Distributed Systems Management* Wolfgang Schröder-Preikschat, 1990-05-22 The purpose of this workshop was to provide a general forum for distributed systems researchers Special emphasis was placed on research activities in distributed operating systems and management of distributed systems This volume includes a selection of the papers presented at the workshop They focus on the illustration of existing concepts and solutions in distributed systems research and development exemplified by case study analyses of various projects The annex contains the position papers prepared for the panel discussions at the workshop *Dynamische Ressourcenverwaltung für dienstbasierte Software-Systeme* Peter Tröger, 2008 *Operating Systems: Principles And Design* Pabitra Pal Choudhury, 2011-07-30 Examines the workings of an operating system which is essentially a concurrent programme and strikes a fine balance between theory and practice It provides the programme design illustration and guidance along with new concepts and presents an in depth analysis of the fundamental concepts of an OS as an interrupt driven programme whose basic constituents are the processes giving rise to a concurrent programme **Algorithms and Architectures for Parallel Processing** Sang-Soo Yeo, Jong Hyuk Park, Laurence Tianruo Yang, Ching-Hsien Hsu, 2010-05-29 It is our great pleasure to present the proceedings of the symposia and workshops on parallel and distributed computing and applications associated with the ICA3PP 2010 conference These symposia and workshops provide vibrant opportunities for researchers and industry practitioners to share their research experience original research results and practical development experiences in the new challenging research areas of parallel and distributed computing technologies and applications It was the first time that the ICA3PP conference series added symposia and workshops to its program in order to provide a wide range of topics that extend beyond the main conferences The goal was to provide a better coverage of emerging research areas and also forums for focused and stimulating discussions With this objective in mind we selected three workshops to accompany the ICA3PP 2010 conference FPDC 2010 the 2010 International Symposium on Frontiers of Parallel and Distributed Computing HPCTA 2010 the 2010 International Workshop on High Performance Computing Technologies and Applications M2A 2010 the 2010 International Workshop on Multicore and Multithreaded Architectures and Algorithms Each of the symposia workshops focused on a particular theme and complemented the spectrum of the main conference All papers published in the workshops proceedings were selected by the Program Committee on the basis of referee reports Each paper was reviewed by independent referees who judged the papers for originality quality contribution presentation and consistency with the theme of the workshops **Building Scalable Network Services** Cheng Jin, Sugih Jamin, Danny

Raz, Yuval Shavitt, 2012-12-06 Building Scalable Network Services Theory and Practice is on building scalable network services on the Internet or in a network service provider's network. The focus is on network services that are provided through the use of a set of servers. The authors present a tiered scalable network service model and evaluate various services within this architecture. The service model simplifies design tasks by implementing only the most basic functionalities at lower tiers where the need for scalability dominates functionality. The book includes a number of theoretical results that are practical and applicable to real networks such as building network wide measurement monitoring services and strategies for building better P2P networks. Various issues in scalable system design and placement algorithms for service nodes are discussed. Using existing network services as well as potentially new but useful services as examples, the authors formalize the problem of placing service nodes and provide practical solutions for them.

**Web Services** Gustavo Alonso, Fabio Casati, Harumi Kuno, Vijay Machiraju, 2003-09-04 Like many other incipient technologies Web services are still surrounded by a substantial level of noise. This noise results from the always dangerous combination of wishful thinking on the part of research and industry and of a lack of clear understanding of how Web services came to be. On the one hand multiple contradictory interpretations are created by the many attempts to realign existing technology and strategies with Web services. On the other hand the emphasis on what could be done with Web services in the future often makes us lose track of what can be really done with Web services today and in the short term. These factors make it extremely difficult to get a coherent picture of what Web services are, what they contribute and where they will be applied. Alonso and his co-authors deliberately take a step back. Based on their academic and industrial experience with middleware and enterprise application integration systems they describe the fundamental concepts behind the notion of Web services and present them as the natural evolution of conventional middleware necessary to meet the challenges of the Web and of B2B application integration. Rather than providing a reference guide or a how to write your first Web service kind of book they discuss the main objectives of Web services, the challenges that must be faced to achieve them and the opportunities that this novel technology provides. Established as well as recently proposed standards and techniques e.g. WSDL, UDDI, SOAP, WS-Coordination, WS-Transactions and BPEL are then examined in the context of this discussion in order to emphasize their scope, benefits and shortcomings. Thus the book is ideally suited both for professionals considering the development of application integration solutions and for research and students interested in understanding and contributing to the evolution of enterprise application technologies.
