Interactions Between Computational Intelligence and Mathematics Part 2 László T. Kóczy, Jesús Medina-Moreno, Eloísa Ramírez-Poussa, 2018-11-02 This book presents recent research in the field of interaction between computational intelligence and mathematics In the current technological age we face the challenges of tackling very complex problems in the usual sense but also in the mathematical and theoretical computer science sense However even the most up to date results in mathematics are unable to provide exact solutions of such problems and no further technical advances will ever make it possible to find general and exact solutions Constantly developing technologies including social technologies necessitate handling very complex problems This has led to a search for acceptably good or precise solutions which can be achieved by the combination of traditional mathematical techniques and computational intelligence tools in order to solve the various problems emerging in many different areas to a satisfactory degree Important funding programs such as the European Commission s current framework programme for research and innovation Horizon 2020 are devoted to

the development of new instruments to deal with the current challenges Without doubt research topics associated with the interactions between computational intelligence and traditional mathematics play a key role Presenting contributions from engineers scientists and mathematicians this book offers a series of novel solutions for meaningful and real world problems that connect those research areas

Real-time Artificial Intelligence Control and Optimization of a Full-scale WTP Riyaz Shariff,2006 This study

shows that advanced artificial neural network ANN model based control systems can be used for drinking water treatment process control ANN technology an artificial intelligence technology that has the ability to learn patterns and relationships contained in sets of data is the most powerful modeling tool currently available to the drinking water treatment industry ANN predicts the output of a process given the values of process inputs and process control variables The results of this project have the potential to revolutionize the way in which drinking water utilities optimize and control their unit processes to efficiently and consistently supply high quality drinking water

Computational Intelligence and Mathematics for Tackling Complex Problems 3 István Á. Harmati, László T. Kóczy, Jesús Medina, Eloísa Ramírez-Poussa, 2021-08-25 Complex problems and systems which prevail in the real world cannot often be tackled and solved either by traditional methods offered by mathematics or even the traditional computer science CS and artificial intelligence AI What is the way out of this dilemma Advanced methodologies and tools and techniques mimicking human reasoning or the behavior of animals animal populations or certain parts of the living body based on traditional computer science and the initial approaches of artificial intelligence are often referred to as biologically inspired methods or often computational intelligence CI Computational intelligence offers effective and efficient solutions to many unsolvable problems However it is far from being a ready to use and complete collection of approaches and is rather a continuously developing field without clear borders The emerging new models and algorithms of computational intelligence are deeply rooted in the vast apparatus of traditional mathematics Thus the investigation of connections and synergy between mathematics and computational intelligence is an eminent goal which is periodically pursued by a group of mathematicians and computational intelligence researchers who regularly attend the annual European Symposia on Computational Intelligence and Mathematics ESCIM Some relevant papers from the last ESCIM 2020 are included in this volume
