

## PRE-LAB QUESTIONS

1. Arrange the following molecules from least to most specific with respect to the original nucleotide sequence: RNA, DNA, Amino Acid, Protein.

protein < amino acid < RNA < DNA

2. Identify two structural differences between DNA and RNA.

DNA has a double stranded structure while RNA is single stranded. DNA is longer while RNA is shorter.

3. Suppose you are performing an experiment in which you must use heat to denature a double helix and create two single stranded pieces. Based on what you know about nucleotide bonding, do you think the nucleotides will all denature at the same time? Use scientific reasoning to explain why.

No, all the nucleotides don't denature at the same time because there are differences between the number of H bonds between bases. A and T carries two hydrogen bonds between them. G and C carries three hydrogen bonds between them.
