Journal für Buchdruckerkunst, Schriftgießerei und verwandte Fächer, 1864 **Albertino Mussato: The Making of a Poet Laureate** Aislinn McCabe, 2022-01-27 This book examines the life and political career of Albertino Mussato 1261 1329 a Paduan poet historian and politician Mussato was one of the first writers of the late medieval period to begin reviving classical Latin in his works His classical style tragic drama Ecerinis inspired by the writings of Seneca paved the way for him to be crowned as the first poet laureate since antiquity This work outlines how Mussato depicted the course of his own career from being an impoverished teenager of insignificant birth to becoming a celebrated poet and scholar as well as an influential political figure It looks specifically at the years leading up to Mussato s public coronation on 3rd December 1315 as poet laureate for his city His writings are a key component of his political manoeuvres as he tried to navigate through the troubled waters of northern Italian politics The book demonstrates how the sources pertaining to Mussato s life and career are part of an exercise in self promotion and self fashioning intended to secure his position within factional politics but rooted in a philosophical approach derived from his early classical studies Accordingly this book acts as a fully fledged account of the interaction between Mussato s writings and his political career and how this contributed to his rise to fame **Übersicht der gesamten staats- und rechtswissenschaftlichen literatur...**, 1878 **Housing and Planning References**, 1974

Wijnekus, E.F.P.H. Wijnekus, 2013-10-22 The first edition of this dictionary compiled by F J M Wijnekus and published in 1967 was the result of years of systematic collection and preparation of thousands of terms and expressions which were until then not to be found in any other

dictionary The material was correlated for use in his daily work and as the reputation of his private collection spread there was an increasing demand for access to these findings Until 1967 there was no comprehensive multilingual dictionary on the subject former publications were incomplete and out of date and lacked clear definition often leading to disastrous misunderstandings Furthermore the subject of printing paper and ink technology had never been dealt with in dictionary form in relation to other aspects of the graphic industry This new work prepared by F J M Wijnekus and his son has been considerably up dated Much time has been devoted to checking the material against the most reliable and authoritative sources The usefulness of the work has been further enhanced by the addition of Spanish and Italian to the original languages of English French and German The first edition was received with much enthusiastic praise and this new dictionary will undoubtedly continue to be an invaluable tool for all those working with the printed word in the widest sense It is a reference work which should be in the hands of all those in any way connected with the printing industry paper manufacturers ink manufacturers printers bookbinders publishers lithographers lay out men and graphical research institutes **Literarisches Centralblatt für Deutschland** Friedrich Zarncke, Eduard Zarncke, 1883 **Citator, 2nd Series** Prentice-Hall, Inc, 1962 **Literarisches Centralblatt für Deutschland**, 1883 National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1974 First multi year cumulation covers six years 1965 70

Foundations of Elastoplasticity: Subloading Surface Model Koichi Hashiguchi, 2017-05-06 This book is the standard text book of elastoplasticity in which the elastoplasticity theory is comprehensively described from the conventional theory for the monotonic loading to the unconventional theory for the cyclic loading behavior Explanations of vector tensor analysis and continuum mechanics are provided first as a foundation for elastoplasticity theory covering various strain and stress measures and their rates with their objectivities Elastoplasticity has been highly developed by the creation and formulation of the subloading surface model which is the unified fundamental law for irreversible mechanical phenomena in solids The assumption that the interior of the yield surface is an elastic domain is excluded in order to describe the plastic strain rate due to the rate of stress inside the yield surface in this model aiming at the prediction of cyclic loading behavior although the yield surface enclosing the elastic domain is assumed in all the elastoplastic models other than the subloading surface model

Then the plastic strain rate develops continuously as the stress approaches the yield surface providing the advantages 1 The tangent modulus changes continuously 2 The yield judgment whether the stress reaches the yield surface is not required 3 The stress is automatically attracted to the yield surface even when it goes out from the yield surface by large loading increments in numerical calculation and 4 The finite strain theory based on the multiplicative decomposition of deformation gradient tensor is formulated exactly Consequently the monotonic the cyclic the non proportional loading behaviors for wide classes of materials including soils rocks and concretes in addition to metals can be described rigorously by the subloading surface model Further the viscoplastic constitutive equations in a general rate from the quasi static to the impact loadings are described and constitutive equations of friction behavior and its application to the prediction of stick slip phenomena etc are also described in detail In addition the return mapping algorithm the consistent tangent modulus etc are explained for the numerical analyses Further the damage the phase transformation and the crystal plasticity models are also described in brief All of them are based on the subloading surface model The elastoplasticity analysis will be advanced steadily based on the subloading surface model
