Introduction to Distributed Computer Systems Ludwik Czaja, 2018-01-24 This book introduces readers to selected issues in distributed systems and primarily focuses on principles not on technical details Though the systems discussed are based on existing von Neumann computer architectures the book also touches on emerging processing paradigms Uniquely it approaches system components not only as static constructs but also in action exploring the different states they pass through The author's teaching experience shows that newcomers to the field students and even IT professionals can far more readily grasp the essence of distributed algorithmic structures in action than on the basis of static descriptions

The Dilemma of Coalition Instability in Consensual Nonmonogamy James K. Beggan, 2020-11-18

Different forms of consensual nonmonogamy such as polyamory and swinging have achieved greater prominence in daily conversation and representation in mass media Although advocates recognize that the presence of additional people creates difficulties the author argues that this greater complexity may lead to unavoidable instability Drawing from classic work by Georg Simmel as well as modern research in the social sciences James K Beggan considers how the presence of a third person is what allows the formation of

coalitions which then become part of the process that can break apart the triad This paradox explained with reference to game theory and social interdependence represents the existential threat to the quest for consensual nonmonogamy Beggan describes how psychological processes involving social comparison and gender and sexual orientation can limit the formation of certain types of coalitions which in turn influence which relationships can be expected to emerge in the context of consensual nonmonogamy His analysis includes macro level social issues related to establishing consensual nonmonogamy as a valid social identity and alternative to conventional marriage Using insights from game theory he suggests possible meta solutions to coalition conflicts that emerge in triadic romantic and sexual relationships
