Rockman, 2000-11-09 Often the finest artists do not make the best teachers Many frustrated college students of art know this all too well as they suffer through unstructured classes with inexperienced teachers or graduate student instructors In these situations it is easy to blame the teachers But the problem is largely institutional most students graduating with MFAs from art schools receive little if any instruction in teaching art If you find yourself in this predicament as teacher or student this book is for you The first book to provide a comprehensive guide for teaching college level art *The Art of Teaching Art* is the culmination of respected artist and instructor Deborah Rockman's two decades of teaching experience Believing that drawing is the backbone of all of the visual arts she begins with a complete explanation of drawing concepts that apply to any subject matter e g composition sighting processes scaling techniques and methods for linear and tonal development She then illustrates these concepts with step by step methods that easily translate to classroom exercises Next she applies the drawing principles to every artist's most important and challenging subject the human figure After an extended section on understanding and teaching perspective that explores illusionistic form and space the focus of the book shifts to the studio classroom itself and the essential elements that go into making an effective learning environment and curriculum From preparing materials lists and syllabi to setting up still lifes handling difficult classroom situations critiquing and grading student artworks and shooting slides of student artworks she leaves no stone unturned **The Fourth Dimension and**

Non-Euclidean Geometry in Modern Art, revised edition Linda Dalrymple Henderson, 2018-05-18 The long awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art In this groundbreaking study first published in 1983 and unavailable for over a decade Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception the curved spaces of non Euclidean geometry and most important a higher fourth dimension of space were central to the development of modern art The possibility of a spatial fourth dimension suggested

that our world might be merely a shadow or section of a higher dimensional existence That iconoclastic idea encouraged radical innovation by a variety of early twentieth century artists ranging from French Cubists Italian Futurists and Marcel Duchamp to Max Weber Kazimir Malevich and the artists of De Stijl and Surrealism In an extensive new Reintroduction Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000 Although largely eclipsed by relativity theory beginning in the 1920s the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s In a remarkable turn of events it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics with its ten or eleven dimensional universes and computer graphics Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller Robert Smithson and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak
