Climate Change in 2018: Implications for Business

[The Department of Defense] recognizes the reality of climate change and the significant risk it poses to U.S. interests globally. The National Security Strategy, issued in February 2015, is clear that climate change is an urgent and growing threat to our national security, contributing to increased natural disasters, refugee flows, and conflicts over basic resources such as food and water. These impacts are already occurring, and the scope, scale, and intensity of these impacts are projected to increase over time.

— United States Department of Defense, July 2015¹

The risk of large-scale climate change is one of the central issues facing the world. There is widespread consensus among the scientific community that the Earth is warming, that this warming is caused by human emissions of greenhouse gases (GHGs), and that the consequences of continued warming are likely to be severe. There is also global concern about the issue: in a recent Pew poll, majorities in all 40 nations polled said that climate change was a serious problem, and a global median of 54% said that it was a very serious problem.

But there is widespread disagreement about what — if anything — should be done in response. While many economists believe that the benefits of reducing global emissions greatly exceed the costs, there is only partial agreement as to what exactly should be done, how quickly it is appropriate to act, and who should pay the costs. Some people, particularly in the United States, reject the scientific consensus altogether. Others fear that many of the proposed solutions will be expensive and inefficient, or that the free riding problems inherent in reducing emissions — namely, that everyone benefits while particular nations, firms, or individuals must bear the costs — will make it impossible to substantially reduce the risk of significant global climate change.

As a result, the risks of climate change — and the costs and regulatory changes that these risks may drive — are emerging as central issues for the private sector. Some business leaders see climate change as a threat to their firms' viability. Others see opportunity in promoting technologies that will mitigate the risk of climate change by reducing GHG emissions or by helping the world in adapting to its effects. Some are actively lobbying against government action, while others are lobbying for industry, state, and global carbon policies. This note attempts to summarize what is known about the causes, current impacts, and likely future consequences of climate change; to outline the current debate about what should be done; and to explore the implications for the private sector.

Professors Rebecca M. Henderson and SoPIen A. Reinert, Polina Dudnyar (MBA, 2016), and Case Researcher Amram Migdal (Case Research & Writing Group) prepared this note as the basis for class discussion.

Sustainability: Business And Investment Implications Diane-charlotte Simon, Alexander S Preker, Susan C Hulton, 2023-09-27 This book explores the business and investment implications of sustainability both opportunities and challenges. The volume lays the groundwork for understanding the growing areas of sustainable business and sustainable finance. Over the past few decades, the world has witnessed significant improvements in economic development that meet a wide range of human needs. Ensuring that such development takes place in a sustainable way is the central focus of the book. The book provides insights for businesses, investors, and others on how to navigate this complex and evolving landscape. The United Nations and global leaders in business and investment have emphasized the important role that the private sector can play in protecting the environment and promoting a more sustainable use of resources. What is needed now is a new era of economic growth that is at the same time socially and environmentally sustainable. This call for action in the Forward to the 1987 Brundtland Report, *Our Common Future*, which emphasizes that economic growth is part of the solution, not the problem, still rings true nearly 40 years later. Gro Harlem Brundtland, Report of the World Commission on Environment and Development, United Nations, 1987. Private sector leadership is vital to advance sustainable development and fight the existential threats of climate change, biodiversity loss, and pollution. Corporate Regulation for Climate Change Mitigation in Africa Kikelomo O. Kila, 2022-09-08 This book critically analyses the prospects of overhauling the legal framework of climate change regulation of corporations in African state It adopts the dilute interventionism regulatory framework to tackle the culture of regulatory resistance by corporations in Africa Over the course of this volume Kikelomo O Kila critiques the climate change legal framework in all 53 African states and conducts an in depth case study of the two largest economies in Africa Nigeria and South Africa to highlight the commonality of the problems in Africa and the potential for the dilute interventionism paradigm to significantly address these problems The book establishes why African states should directly intervene through legislative mechanisms to compel corporations to incorporate climate change mitigation in their business activities It proposes that this direct intervention should comprise a blend of prescriptive and facilitative mechanisms structured in a dilute interventionism regulatory model Overall this volume argues that implementing this model requires the institution of a strong and independent regulator with a veto firewall protection system that guarantees its de facto independence from government and external influences Corporate Regulation for Climate Change Mitigation in Africa will be of great interest to climate change stakeholders at the international regional and domestic levels policymakers regulatory practitioners and legal experts on corporate regulation It will also be an insightful resource for students and scholars of climate change and environmental law policy and governance **Risk**
