Coders Work Reflections Craft Programming Epub :

Coders Clive Thompson, 2019-04-04 From revolution on Twitter to romance on Tinder we live in a world constructed of code and coders are the ones who built it for us In *Coders* acclaimed tech writer Clive Thompson offers an illuminating reckoning with the most powerful tribe in the world today computer programmers asking who they are how they think and what should give us pause Along the way Thompson ponders the morality and politics of code including its implications for civic life and the economy and unpacks the surprising history of the field beginning with the first coders brilliant and pioneering women who were later written out of history To understand the world today we need to understand code and its consequences With *Coders* Thompson offers a crucial insight into the heart of the machine By breaking down what the actual world of coding looks like Thompson removes the mystery and brings it into the legible world for the rest of us to debate New York Times Masterful Thompson illuminates both the fascinating coders and the bewildering technological forces that are transforming the world in which we live David Grann author of *The Lost City of Z*

The Problem with Software Adam Barr, 2018-10-23 An industry insider explains why there is so much bad software and why academia doesn't teach programmers what industry wants them to know Why is software so prone to bugs So vulnerable to viruses Why are software products so often delayed or even canceled Is software development really hard or are software developers just not that good at it In *The Problem with Software* Adam Barr examines the proliferation of bad software explains what causes it and offers some suggestions on how to improve the situation For one thing Barr points out academia doesn't teach programmers what

they actually need to know to do their jobs how to work in a team to create code that works reliably and can be maintained by somebody other than the original authors As the size and complexity of commercial software have grown the gap between academic computer science and industry has widened It s an open secret that there is little engineering in software engineering which continues to rely not on codified scientific knowledge but on intuition and experience Barr who worked as a programmer for more than twenty years describes how the industry has evolved from the era of mainframes and Fortran to today s embrace of the cloud He explains bugs and why software has so many of them and why today s interconnected computers offer fertile ground for viruses and worms The difference between good and bad software can be a single line of code and Barr includes code to illustrate the consequences of seemingly inconsequential choices by programmers Looking to the future Barr writes that the best prospect for improving software engineering is the move to the cloud When software is a service and not a product companies will have more incentive to make it good rather than good enough to ship **Advanced**

Beatrice Fazi,2018-11-15 In Contingent Computation M

Beatrice Fazi offers a new theoretical perspective through which we can engage philosophically with computing The book proves that aesthetics is a viable mode of investigating contemporary computational systems It does so by advancing an original conception of computational aesthetics that does not just concern art made by or with computers but rather the modes of being and becoming of computational processes Contingent Computation mobilises the philosophies of Gilles

Deleuze and Alfred North Whitehead in order to address aesthetics as an ontological study of the generative potential of reality Through a novel philosophical reading of Gödel's incompleteness theorems and of Turing's notion of incomputability Fazi finds this potential at the formal heart of computational systems and argues that computation is a process of determining indeterminacy This indeterminacy which is central to computational systems does not contradict their functionality Instead it drives their very operation albeit in a manner that might not always fit with the instrumental representational and cognitivist purposes that we have assigned to computing

Code and the City

Rob Kitchin, Sung-Yueh Perng, 2016-04-20 Software has become essential to the functioning of cities It is deeply embedded into the systems and infrastructure of the built environment and is entrenched in the management and governance of urban societies Software enabled technologies and services enhance the ways in which we understand and plan cities It even has an effect on how we manage urban services and utilities Code and the City explores the extent and depth of the ways in which software mediates how people work consume communication travel and play The reach of these systems is set to become even more pervasive through efforts to create smart cities cities that employ ICTs to underpin and drive their economy and

governance Yet despite the roll out of software enabled systems across all aspects of city life the relationship between code and the city has barely been explored from a critical social science perspective This collection of essays seeks to fill that gap and offers an interdisciplinary examination of the relationship between software and contemporary urbanism This book will be of interest to those researching or studying smart cities and urban infrastructure
