Programming Language Cultures Brian Lennon, 2024-08-27 In this book Brian Lennon demonstrates the power of a philological approach to the history of programming languages and their usage cultures In chapters focused on specific programming languages such as SNOBOL and JavaScript as well as on code comments metasyntactic variables the very early history of programming and the concept of DevOps Lennon emphasizes the histories of programming languages in their individual specificities over their abstract formal or structural characteristics viewing them as carriers and sometimes shapers of specific cultural histories The book's philological approach to programming languages presents a natural sensible and rigorous way for researchers trained in the humanities to perform research on computing in a way that draws on their own expertise Combining programming knowledge with a humanistic analysis of the social and historical dimensions of computing Lennon offers researchers in literary studies STS media and digital studies and technical fields the first technically rigorous approach to studying programming languages from a humanities based perspective

The Patentability of Software Anton Hughes, 2019-02-18 This book explores the question of whether software should be patented It analyses the ways in which the courts of the US the EU and Australia have attempted to deal with the problems surrounding the patentability of software and describes why it is that the software patent issue should be dealt with as a patentable subject matter issue rather than as an issue of novelty or nonobviousness Anton Hughes demonstrates that the current approach has failed and that a fresh approach to the

software patent problem is needed The book goes on to argue against the patentability of software based on its close relationship to mathematics Drawing on historical and philosophical accounts of mathematics in pursuit of a better understanding of its nature and focusing the debate on the conditions necessary for mathematical advancement the author puts forward an analytical framework centred around the concept of the useful arts This analysis both explains mathematics and therefore software's nonpatentability and offers a theory of patentable subject matter consistent with Australian American and European patent law

Institutional Literacies Stuart A. Selber,2020-09-04 Information technologies have become an integral part of writing and communication courses shaping the ways students and teachers think about and do their work But too often teachers and other educational stakeholders take a passive or simply reactive role in institutional approaches to technologies and this means they are missing out on the chance to make positive changes in their departments and on campus Institutional Literacies argues that writing and communication teachers and program directors should collaborate more closely and engage more deeply with IT staff as technology projects are planned implemented and expanded Teachers need to both analyze how their institutions approach information technologies and intervene in productive ways as active university citizens with relevant expertise To help them do so the book offers a three part heuristic reflecting the reality that academic IT units are complex and multilayered with historical spatial and textual dimensions It discusses six ways teachers can intervene in the academic IT work of their own institutions maintaining awareness using systems and services mediating for audiences participating as user advocates working as designers and partnering as researchers With these strategies in hand educators can be proactive in helping institutional IT approaches align with the professional values and practices of writing and communication programs
