

An abstract painting featuring three stylized, light-colored figures arranged in a circular, triangular formation. The figures appear to be reaching out or dancing, with long, flowing limbs. The background is a mix of dark blue, green, and brown tones, with a textured, painterly quality. The overall mood is dynamic and somewhat ethereal.

Cognitive Neuroscience of Language David Kemmerer, 2014-11-20. Language is one of our most precious and uniquely human capacities so it is not surprising that research on its neural substrates has been advancing quite rapidly in recent years. Until now however there has not been a single introductory textbook that focuses specifically on this topic. *Cognitive Neuroscience of Language* fills that gap by providing an up to date wide ranging and pedagogically practical survey of the most important developments in the field. It guides students through all of the major areas of investigation beginning with fundamental aspects of brain structure and function and then proceeding to cover aphasia syndromes, the perception and production of speech, the processing of language in written and signed modalities, the meanings of words and the formulation and comprehension of complex expressions including grammatically inflected words, complete sentences and entire stories. Drawing heavily on prominent theoretical models, the core chapters illustrate how such frameworks are supported and sometimes challenged by experiments employing diverse brain mapping techniques. Although much of the content is inherently challenging and intended primarily for graduate or upper level undergraduate students, it requires no previous knowledge of either neuroscience or linguistics, defining technical terms and explaining important principles from both disciplines along the way.

Love and Selfhood Annemarie van Stee, 2022-07-27. After years of neurohype and a neuroskeptical backlash, this book provides a systematic analysis of the contributions to self-understanding. Cognitive neuroscience, CNS, and philosophy can make the stories of five people in search of self-understanding serve as touchstones throughout the book. Their identities are tied up with what they love. The book provides in-depth analyses of CNS of love and CNS of self-reflection. It critically discusses philosophers who focus on the relation between love, self-understanding, and selfhood such as Harry Frankfurt, Susan Wolf, Charles Taylor, and Søren Kierkegaard. It also builds an argument about CNS contributions to self-understanding more broadly and how different these are from philosophy's contributions. The book develops conceptual review as a philosophical method for improving the validity and comparability of CNS studies. It integrates CNS insights into its philosophical view on love and selfhood where applicable. This book thus argues and exemplifies that philosophy and CNS can work together.

Opferzeiten Jochen Welt, 2021. Du Opfer so schallt es nicht selten bei Schulhelfer, Armutsopfer oder Opfer der Globalisierung, Opfer der Zuwanderung, Opfer des Corona-Terrors. Heißt es oft in den Medien und bei Demonstrationen auf Straßen und Plätzen. Durch die inflationäre Nutzung des Begriffes hat sich eine diffuse Beliebigkeit im Gebrauch entwickelt. Immer mehr Individuen und Gruppen gerieren sich heute als Opfer, ohne als

reale Opfer gelten zu können Das Buch zeigt die Gefahren auf die ein inflationärer Missbrauch des Opferbegriffs auf Dauer für unseren demokratischen Rechts und Sozialstaat hat Der Autor unternimmt einen Parforceritt durch die archaischen religiösen philosophischen und historischen Dimensionen des Opferbegriffs Dazu durchforstet er die Geistes und Politikgeschichte nach bis heute vitalen Spuren Er entwickelt daraus einen dynamischen Opferbegriff der in der aktuellen Diskussion zunehmend an Schärfe gewinnt Detailliert und empirisch fundiert stellt der Autor den Begriff des virtuellen Opfers ins Zentrum seiner Überlegungen Der Schluss des Buches versucht originelle Wege aufzuzeigen der Opferfälle zu entrinnen in die wir sowohl als Individuen aber auch als Gesellschaft zu geraten drohen **The Rise of Homo Sapiens** Frederick Lawrence

Principles of Noology Seng-Beng Ho,2016-06-29 The idea of this book is to establish a new scientific discipline noology under which a set of fundamental principles are proposed for the characterization of both naturally occurring and artificial intelligent systems The methodology adopted in Principles of Noology for the characterization of intelligent systems or

noological systems is a computational one much like that of AI. Many AI devices such as predicate logic representations, search mechanisms, heuristics, and computational learning mechanisms are employed but they are recast in a totally new framework for the characterization of noological systems. The computational approach in this book provides a quantitative and high resolution understanding of noological processes and at the same time the principles and methodologies formulated are directly implementable in AI systems. In contrast to traditional AI that ignores motivational and affective processes, under the paradigm of noology, motivational and affective processes are central to the functioning of noological systems and their roles in noological processes are elucidated in detailed computational terms. In addition, a number of novel representational and learning mechanisms are proposed and ample examples and computer simulations are provided to show their applications. These include rapid effective causal learning, a novel learning mechanism that allows an AI noological system to learn causality with a small number of training instances, learning of scripts that enables knowledge chunking and rapid problem solving, and learning of heuristics that further accelerates problem solving. Semantic grounding allows an AI noological system to truly understand the meaning of the knowledge it encodes. This issue is extensively explored. This is a highly informative book providing novel and deep insights into intelligent systems which is particularly relevant to both researchers and students of AI and the cognitive sciences.

The enduring contribution of psychology into modern times will remain contingent on practitioners' commitment to ethically based, empirically focused, evidence-based practice, continuing education, and scientific discovery. This book will help health service psychologists and counselors to meet the needs of an increasingly diverse population by providing cutting edge, evidence-based, ecologically valid neuropsychological interventions currently lacking within the field. Cultural considerations are provided within each chapter which is especially important given societal inequity that continues.
