Workfusion Smart Process Automation Workfusion

Christian Czarnecki, Peter Fettke

Workfusion Smart Process Automation Workfusion:

Digitalisierung in Unternehmen Thomas Barton, Christian Müller, Christian Seel, 2018-10-18 Das Buch vermittelt aktuelle Ansätze der Digitalisierung in Unternehmen und zeigt auf, wie Digitalisierungsprojekte erfolgreich und sicher in der Praxis umgesetzt werden. Ausgehend von der Beschreibung einer sich wandelnden Wertschöpfung und Arbeitswelt wird anhand von Anwendungsszenarien dargelegt, welche Änderungen mit der Digitalisierung einhergehen. Neue Geschäftsmodelle und Geschäftsprozesse etablieren sich, die Entwicklung von Produkten verändert sich ebenso wie die Interaktion mit Kunden; neue Chancen, aber auch neue Risiken entstehen. Die Beitragsautoren stellen dabei Grundlagen als auch Konzepte vor, um die Digitalisierung von Prozessen und Anwendungen konkret zu planen und durchzuführen. Auch Aspekte der IT-Sicherheit kommen dabei nicht zu kurz. Das Herausgeberwerk basiert auf Fragestellungen aus der unternehmerischen Praxis und eignet sich auch für Studierende und Lehrende.

Robotic Process Automation Christian Czarnecki, Peter Fettke, 2021-05-10 This book brings together experts from research and practice. It includes the design of innovative Robot Process Automation (RPA) concepts, the discussion of related research fields (e.g. Artificial Intelligence (AI)), the evaluation of existing software products, and findings from real-life implementation projects. Similar to the substitution of physical work in manufacturing (blue collar automation), Robotic Process Automation tries to substitute intellectual work in office and administration processes with software robots (white collar automation). The starting point for the development of RPA was the observation that despite the use of process-oriented enterprise systems such as ERP, CRM, and BPM systems, additional manual activities are still indispensable today. In the RPA approach, these manual activities are learned and automated by software robots either by defining rules or by observing manual activities. RPA is related to business process management, machine learning, and artificial intelligence. Tools for RPA originated from dedicated stand-alone software. Today, RPA functionalities are also integrated into elaborated process management suites. From a conceptual perspective, RPA can be structured into input components (sensors in the wide sense), an intelligence center, and output components (actuators in the wide sense). From a strategic perspective, the impact of RPA can be related to the support of existing tasks, the complete substitution of human activities, and the innovation of processes as well as business models. At present, high expectations are related to the use of RPA in the improvement of software-supported business processes. Manual activities are learned and automated by software robots that interact with existing applications via the presentation layer. In combination with artificial intelligence (AI) as well as innovative interfaces (e.g. voice recognition), RPA creates a novel level of automation for office and administration processes. Its benefit potential reaches a return on investment (ROI) up to 800%, that is documented in various case studies.

Robotic Process Automation (RPA) - Digitalisierung und Automatisierung von Prozessen Christian Langmann, Daniel Turi, 2020-02-19 Das vorliegende Buch gibt einen praxisorientierten Überblick über die notwendigen Voraussetzungen, die Funktionsweise sowie die einzelnen Schritte für die erfolgreiche Einführung von Robotic Process Automation (RPA). Neben theoretischen Grundlagen
