Integration *City Cycling* John Pucher, Ralph Buehler, 2012-10-19 A guide to today's urban cycling renaissance with information on cycling's health benefits, safety, bikes and bike equipment, bike lanes, bike sharing and other topics. Bicycling in cities is booming for many reasons: health and environmental benefits, time and cost savings, more and better bike lanes and paths, innovative bike sharing programs and the sheer fun of riding. *City Cycling* offers a guide to this urban cycling renaissance with the goal of promoting cycling as sustainable urban transportation available to everyone. It reports on cycling trends and policies in cities in North America, Europe and Australia and offers information on such topics as cycling safety, cycling infrastructure provisions including bikeways and bike parking, the wide range of bike designs and bike equipment, integration of cycling with public transportation and promoting cycling for women and children. *City Cycling* emphasizes that bicycling should not be limited to those who are highly trained, extremely fit and daring enough to battle traffic on busy roads. The chapters describe ways to make city cycling feasible, convenient and safe for commutes to work and school, shopping trips, visits and other daily transportation needs. The book also offers detailed examinations and illustrations of cycling conditions in different urban environments: small cities including Davis, California and Delft, the Netherlands; large cities including Sydney, Chicago, Toronto and Berlin; and megacities London, New York, Paris and Tokyo. These chapters offer a closer look at how cities both with and without historical cycling cultures have developed cycling programs over time. The book makes clear that successful promotion of city cycling depends on coordinating infrastructure programs and government policies.

Spinney, 2020-10-28 Academic interest in cycling has burgeoned in recent years with significant literature relating to the health and environmental benefits of cycling the necessity for cycle specific infrastructure and the embodied experiences of cycling Based upon primary research in a variety of contexts such as London Shanghai and Taipei this book demonstrates that recent developments in urban cycling policy and practice are closely linked to broader processes of capital accumulation It argues that cycling is increasingly caught up in discourses around smart cities that emphasise technological solutions to environmental problems and neoliberal ideas on individual responsibility and bio political conduct which only results in solutions that prioritise those who are already mobile Accordingly the central argument of the book is not that the popularisation of cycling is inherently bad but that the manner in which cycling is being popularised gives cause for social and environmental concern Ultimately the book argues that cycling has now become a vehicle for sustaining pro growth agendas rather than subverting them or shifting to sustainable no growth de growth and less technologically driven visions of modernity This book makes an innovative contribution to the fields of Cycling Studies Mobilities and Transport and will be of interest to students and academics working in Human Geography Transport Studies Urban Studies Urban Planning Public

Policy Sociology and Sustainability **Cycling to Work** Patrick R  rat, 2020-12-07 This book presents a thorough discussion of utility cycling in the urban environment and everyday mobility. It is based on a large survey answered by 14 000 participants in the bike to work action in Switzerland and quantifies the various dimensions of utility cycling. It proposes an innovative theoretical framework to analyse and understand the various dimensions of the uses of bikes and their diversity. It addresses the factors that motivate commuters to get on their bike and highlights the barriers to this practice between deficient infrastructures and lack of legitimacy. This research makes a diagnosis and discusses the way to develop this sustainable mode of transportation. By combining quantitative results in the form of tables, figures and maps and including qualitative results in the form of quotations from survey participants, this book provides a thorough and enjoyable read. It will be of interest to researchers, policy makers, advanced students in the field of urban planning, social sciences and transportation.

Bicycle Utopias Cosmin Popan, 2019-01-15 *Bicycle Utopias* investigates the future of urban mobilities and post-car societies, arguing that the bicycle can become the nexus around which most human movement will revolve. Drawing on literature on post-car futures (Urry 2007, Dennis and Urry 2009, transition theory, Geels et al 2012) and utopian studies (Levitas 2010, 2013), this book imagines a slow bicycle system as a necessary means to achieving more sustainable mobility futures. The imagination of a slow bicycle system is done in three ways: Scenario building to anticipate how cycling mobilities will look in the year 2050; A critique of the system of automobility and of fast cycling futures; An investigation of the cycling senses and sociabilities to describe the type of societies that such a slow bicycle system will enable. *Bicycle Utopias* will appeal to students and scholars in fields such as sociology, mobilities studies, human geography and urban and transport studies. This work may also be of interest to advocates, activists and professionals in the domains of cycling and sustainable mobilities.
