Digital Image Enhancement and Reconstruction Shyam Singh Rajput, Nafis Uddin Khan, Amit Kumar Singh, Karm Veer Arya, 2022-10-06 Digital Image Enhancement and Reconstruction Techniques and Applications explores different concepts and techniques used for the enhancement as well as reconstruction of low quality images. Most real life applications require good quality images to gain maximum performance; however, the quality of the images captured in real world scenarios is often very unsatisfactory. Most commonly, images are noisy, blurry, hazy, tiny, and hence need to pass through image enhancement and/or reconstruction algorithms before they can be processed by image analysis applications. This book comprehensively explores application specific enhancement and reconstruction techniques including satellite image enhancement, face hallucination, low resolution face recognition, medical image enhancement and reconstruction, reconstruction of underwater images, text image enhancement, biometrics, etc. Chapters will present a detailed discussion of the challenges faced in handling each particular kind of image analysis, the best available solutions, and an exploration of applications and future directions. The book provides readers with a deep dive into denoising, dehazing, super resolution, and use of soft computing across a range of engineering applications. Presents comprehensive coverage of digital image enhancement and reconstruction techniques. Explores applications across range of fields including intelligent surveillance systems, human computer interaction, healthcare, agriculture, biometrics, modelling. Explores different challenges and issues related to the implementation of various techniques for different types of images including denoising, dehazing, super resolution, and use of soft computing.
