Semantic Technologies for Intelligent Industry 4.0 Applications Archana Patel,Narayan C. Debnath,2023-10-06 As the world enters the era of big data there is a serious need to give a semantic perspective to the data in order to find unseen patterns derive meaningful information and make intelligent decisions Semantic technologies offer the richest machine interpretable rather than just machine processable and explicit semantics that are being extensively used in various domains and industries These technologies reduce the problem of large semantic loss in the process of modelling knowledge and provide sharable reusable knowledge and a common understanding of the knowledge As a result the interoperability and interconnectivity of the model make it priceless for addressing the issues of querying data These technologies work with the concepts and relations that are very close to the working of the human brain They provide a semantic representation of any data format unstructured or semi structured As a consequence data becomes real world entity rather than a string of characters For these reasons semantic technologies are highly valuable tools to simplify the existing problems of the industry leading to new opportunities However there are some challenges that need to be addressed to make industrial applications and machines smarter This book aims to provide a roadmap for semantic technologies and highlights the role of these technologies in industry The book also explores the present and future prospects of these semantic technologies along with providing answers to various questions like Are semantic technologies useful for the next era industry 4 0 Why are semantic technologies so popular and extensively used in the industry Can

semantic technologies make intelligent industrial applications Which type of problem requires the immediate attention of researchers Why are semantic technologies very helpful in people s future lives This book will potentially serve as an important guide towards the latest industrial applications of semantic technologies for the upcoming generation and thus becomes a unique resource for scholars researchers professionals and practitioners in the field

Industrial Waste Heat Utilization Tobias

Bornemann, 2017-12-19 Für Unternehmen der produzierenden Automobilindustrie stellt Energieeffizienzsteigerung ein elementares Instrument zur Verbesserung der Wettbewerbsfähigkeit dar. Der Fokus dieser Dissertation wird auf die Nutzung von Abwärme industrieller Produktionsprozesse gerichtet. Um die Ressource Abwärme quantifizieren zu können wird eine Abwärmeanalyse im Untersuchungsobjekt durchgeführt. Zur Bewertung der möglichen Abwärmenutzungspfade werden sämtliche thermische sowie elektrische Bedarfe durch Vermessung der energetisch relevanten Prozesse ermittelt. Letztendlich wird die direkte thermische Nutzung von Abwärme durch Einspeisung in werksinterne Wärmeversorgungsnetze als zweckmäßige Nutzungsvariante herausgearbeitet. Wird die zur Verfügung stehende Abwärmemenge neben Kraft-Wärme-Kopplungsanlagen in die Energieversorgung eines Produktionsstandortes integriert resultiert ein Spannungsfeld. Primäres Ziel dieser Dissertation besteht in dessen Erforschung und der Analyse der Vorteilhaftigkeit bezüglich der hierarchischen Priorisierung der Ressource Abwärme innerhalb von dezentralen Energiesystemen.
