Digital Systems Ronald J. Tocci,1991 This book is a comprehensive up to date study of the principles and techniques of modern digital system

From scientific instrument to industrial machine Richard Doornbos,Sjir van Loo,2012-04-28 Architectural stress is the inability of a system design to respond to new market demands It is an important yet often concealed issue in high tech systems In *From scientific instrument to industrial machine* we look at the phenomenon of architectural stress in embedded systems in the context of a transmission electron microscope system built by FEI Company Traditionally transmission electron microscopes are manually operated scientific instruments but they also have enormous potential for use in industrial applications However this new market has quite different characteristics There are strong demands for cost effective analysis accurate and precise measurements and ease of use These demands can be translated into new system qualities e g reliability predictability and high throughput as well as new functions e g automation of electron microscopic analyses automated focusing and positioning functions *From scientific instrument to industrial machine* takes a pragmatic approach to the problem of architectural stress In particular it describes the outcomes of the Condor project a joint endeavour by a consortium of industrial and academic partners In this collaboration an integrated approach was essential to successfully combine various scientific results and show the first steps towards a new direction System modelling and prototyping were the key techniques to develop better understanding and innovative solutions to the problems associated with architectural stress *From scientific*

instruments to industrial machine is targeted mainly at industrial practitioners in particular system architects and engineers working on high tech systems It can therefore be read without particular knowledge of electron microscope systems or microscopic applications The book forms a bridge between academic and applied science and high tech industrial practice By showing the approaches and solutions developed for the electron microscope it is hoped that system designers will gain some insights in how to deal with architectural stress in similar challenges in the high tech industry **MICAI 2007: Advances**

in Artificial Intelligence Alexander Gelbukh, Ángel Fernando Kuri Morales, 2007-10-24 This book constitutes the refereed proceedings of the 6th Mexican International Conference on Artificial Intelligence MICAI 2007 held in Aguascalientes Mexico in November 2007 The 116 revised full papers presented were carefully reviewed and selected from numerous submissions for inclusion in the book The papers are organized in sections on topics that include computational intelligence neural networks knowledge representation and reasoning agents and multiagent systems **MATLAB** Kelly Bennett, 2014-09-08
