Commencing with the introduction, the book gives a detailed account of graphs and data structure. It then elaborately discusses the matrix algorithms, basic algorithms, network algorithms, sorting algorithm, backtracking algorithms, and search algorithms. The text also focuses on the heuristics, dynamic programming, and meta heuristics. The concepts of cryptography and probabilistic algorithms have been described in detail. Finally, the book brings out the underlying concepts of benchmarking of algorithms, algorithms to schedule processor s and complexity of algorithms. New to the second Edition: New chapters on Matrix algorithms, Basic algorithms, Backtracking algorithms, Complexity of algorithms. Several new sections including asymptotic notation, amortized analysis, recurrences, balanced trees, skip list, disjoint sets, maximal flow algorithm, parsort, radix sort, selection sort, topological sorting, ordering median and ordered statistics, Huffman coding algorithm, transportation problem, heuristics for scheduling etc have been incorporated into the text.

Algorithms Sushil C. Dimri, Preeti Malik, Mangey Ram, 2021-03-08 Algorithms play a central role both in the theory and in the practice of computing. The goal of the authors was to write a textbook that would not trivialize the subject but would still be readable by most students on their own. The book contains over 120 exercises. Some of them are drills, others make important points about the material covered in the text or introduce new algorithms not covered there. The book also provides programming projects.
