Diophantine Approximations And Value Distribution Theory:

Diophantine Approximations and Value Distribution Theory Paul Alan Vojta, 2006-11-15 **Diophantine Approximations and Value Distribution Theory** Paul Vojta, 1987 *Value Distribution Theory Related to Number Theory* Pei-Chu Hu, Chung-Chun Yang, 2009-09-03 The subject of the book is Diophantine approximation and Nevanlinna theory This book proves not just some new results and directions but challenging open problems in Diophantine approximation and Nevanlinna theory The authors newest research activities on these subjects over the past eight years are collected here Some of the significant findings are the proof of Green Griffiths conjecture by using meromorphic connections and Jacobian sections generalized abc conjecture and more Encyclopaedia of Mathematics Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques **Number Theory I** Yu. I. Manin, Alexei A. Panchishkin, 2013-04-17 Preface Among the various branches of mathematics number theory is characterized to a lesser degree by its primary subject integers than by a psychological attitude Actually number theory also deals with rational algebraic and transcendental numbers with some very specific analytic functions such as Dirichlet series and modular forms and with some geometric objects such as lattices and schemes over \mathbb{Z} The question whether a given article belongs to number theory is answered by its author's system of values If arithmetic is not there the paper will hardly be considered as number theoretical even if it deals exclusively with integers and congruences On the other hand any mathematical tool say homotopy theory or dynamical systems may become an important source of number theoretical inspiration For this reason combinatorics and the theory of recursive functions are not usually associated with number theory whereas modular functions are In this report we interpret number theory broadly There are compelling reasons to adopt this viewpoint First of all the integers constitute together with geometric images one of the

primary subjects of mathematics in general Because of this the history of elementary number theory is as long as the history of all mathematics and the history of modern mathematics began when numbers and figures were united by the concept of coordinates which in the opinion of LR Shafarevich also forms the basic idea of algebra Ultrametric Functional Analysis Bertin Diarra, 2005 With contributions by leading mathematicians this proceedings volume reflects the program of the Eighth International Conference on p adic Functional Analysis held at Blaise Pascal University Clermont Ferrand France Articles in the book offer a comprehensive overview of research in the area A wide range of topics are covered including basic ultrametric functional analysis topological vector spaces measure and integration Choquet theory Banach and topological algebras analytic functions in particular in connection with algebraic geometry roots of rational functions and Frobenius structure in p adic differential equations and q ultrametric calculus The material is suitable for graduate students and researchers interested in number theory functional analysis and algebra *Geometric Complex Analysis - Proceedings Of The Third International Research Institute Of Mathematical Society Of Japan* J Noguchi, Hirotaka Fujimoto, J Kajiwar, Takeo Ohsawa, 1996-05-09 This proceedings is a collection of articles in several complex variables with emphasis on geometric methods and results which includes several survey papers reviewing the development of the topics in these decades Through this volume one can see an active field providing insight into other fields like algebraic geometry dynamical systems and partial differential equations *Collected Papers III* Serge Lang, 2000-07-19 Serge Lang is not only one of the top mathematicians of our time but also an excellent writer He has made innumerable and invaluable contributions in diverse fields of mathematics and was honoured with the Cole Prize by the American Mathematical Society as well as with the Prix Carriere by the French Academy of Sciences Here 83 of his research papers are collected in four volumes ranging over a variety of topics of interest to many readers **Encyclopaedia of Mathematics** M. Hazewinkel, 2013-12-01

Introduction to Modern Number Theory Yu. I. Manin, Alexei A. Panchishkin, 2006-03-30 This edition has been called startlingly up to date and in this corrected second printing you can be sure that it is even more contemporaneous It surveys from a unified point of view both the modern state and the trends of continuing development in various branches of number theory Illuminated by elementary problems the central ideas of modern theories are laid bare Some topics covered include non Abelian generalizations of class field theory recursive computability and Diophantine equations zeta and L functions This substantially revised and expanded new edition contains several new sections such as Wiles proof of Fermat's Last Theorem and relevant techniques coming from a synthesis of various theories **European Congress of Mathematics** Ari Laptev, 2005 The European Congress of Mathematics held every four years has established itself as a major international mathematical event Following those in Paris 1992 Budapest 1996 and Barcelona 2000 the Fourth European Congress of Mathematics took place in Stockholm Sweden June 27 to July 2 2004 with 913 participants from 65 countries Apart from seven plenary and thirty three invited lectures there were six Science Lectures covering the most relevant aspects of

mathematics in science and technology Moreover twelve projects of the EU Research Training Networks in Mathematics and Information Sciences as well as Programmes from the European Science Foundation in Physical and Engineering Sciences were presented Ten EMS Prizes were awarded to young European mathematicians who have made a particular contribution to the progress of mathematics Five of the prizewinners were independently chosen by the 4ECM Scientific Committee as plenary or invited speakers The other five prizewinners gave their lectures in parallel sessions Most of these contributions are now collected in this volume providing a permanent record of so much that is best in mathematics today

Introduction to Complex Hyperbolic Spaces Serge Lang, 2013-03-09 Since the appearance of Kobayashi's book there have been several results at the basic level of hyperbolic spaces for instance Brody's theorem and results of Green Kiernan Kobayashi Noguchi etc which make it worthwhile to have a systematic exposition Although of necessity I reproduce some theorems from Kobayashi I take a different direction with different applications in mind so the present book does not supersede Kobayashi's My interest in these matters stems from their relations with diophantine geometry Indeed if X is a projective variety over the complex numbers then I conjecture that X is hyperbolic if and only if X has only a finite number of rational points in every finitely generated field over the rational numbers There are also a number of subsidiary conjectures related to this one These conjectures are qualitative Vojta has made quantitative conjectures by relating the Second Main Theorem of Nevanlinna theory to the theory of heights and he has conjectured bounds on heights stemming from inequalities having to do with diophantine approximations and implying both classical and modern conjectures Noguchi has looked at the function field case and made substantial progress after the line started by Grauert and Grauert Reckziegel and continued by a recent paper of Riebeschl The book is divided into three main parts the basic complex analytic theory differential geometric aspects and Nevanlinna theory Several chapters of this book are logically independent of each other

Singularities and Complex Geometry Qikeng Lu, 1997 This book presents the proceedings of the joint U S China Seminar on Singularity and Complex Geometry held at the Institute of Mathematics of the Chinese Academy Beijing in June 1994 This was the first gathering of Chinese and American mathematicians working in these fields several Japanese mathematicians also took part The volume covers a wide range of problems in areas such as CR manifolds value distribution theory of holomorphic curves topology of the complements of algebraic plane curves with singularities and arrangements topology of non isolated singularities gauge theory on resolutions of simple singularities and residues of foliations The articles give accounts of research in these fast developing areas Much of the material appears here for the first time in print Titles in this series are co published with International Press Cambridge MA USA

Hilbert's Tenth Problem: Relations with Arithmetic and Algebraic Geometry Jan Denef, 2000 This book is the result of a meeting that took place at the University of Ghent Belgium on the relations between Hilbert's tenth problem arithmetic and algebraic geometry Included are written articles detailing the lectures that were given as well as contributed papers on current topics of interest The following areas are addressed an

historical overview of Hilbert's tenth problem Hilbert's tenth problem for various rings and fields model theory and local global principles including relations between model theory and algebraic groups and analytic geometry conjectures in arithmetic geometry and the structure of diophantine sets for example with Mazur's conjecture Lang's conjecture and Birch's problem and results on the complexity of diophantine geometry highlighting the relation to the theory of computation The volume allows the reader to learn and compare different approaches arithmetical geometrical topological model theoretical and computational to the general structural analysis of the set of solutions of polynomial equations It would make a nice contribution to graduate and advanced graduate courses on logic algebraic geometry and number theory

The Dynamical Mordell-Lang Conjecture Jason P. Bell, Dragos Ghioca, Thomas J. Tucker, 2016-04-20 The Dynamical Mordell Lang Conjecture is an analogue of the classical Mordell Lang conjecture in the context of arithmetic dynamics It predicts the behavior of the orbit of a point x under the action of an endomorphism f of a quasiprojective complex variety X More precisely it claims that for any point x in X and any subvariety V of X the set of indices n such that the n th iterate of x under f lies in V is a finite union of arithmetic progressions In this book the authors present all known results about the Dynamical Mordell Lang Conjecture focusing mainly on a p -adic approach which provides a parametrization of the orbit of a point under an endomorphism of a variety

Complex Analysis and Dynamical Systems VII Mark L. Agranovsky, Matania Ben-Artz, Catherine Bénéteau, Lavi Karp, Dmitry Khavinson, Simeon Reich, David Shkheoit, Gilbert Weinstein, Lawrence Zalcman, 2017 A co publication of the AMS and Bar Ilan University This volume contains the proceedings of the Seventh International Conference on Complex Analysis and Dynamical Systems held from May 10-15 2015 in Nahariya Israel The papers in this volume range over a wide variety of topics in the interaction between various branches of mathematical analysis Taken together the articles collected here provide the reader with a panorama of activity in complex analysis geometry harmonic analysis and partial differential equations drawn by a number of leading figures in the field They testify to the continued vitality of the interplay between classical and modern analysis

Finite or Infinite Dimensional Complex Analysis and Applications Le Hung Son, Wolfgang Tutschke, Chung-Chun Yang, 2013-12-01 There is almost no field in Mathematics which does not use Mathematical Analysis Computer methods in Applied Mathematics too are often based on statements and procedures of Mathematical Analysis An important part of Mathematical Analysis is Complex Analysis because it has many applications in various branches of Mathematics Since the field of Complex Analysis and its applications is a focal point in the Vietnamese research programme the Hanoi University of Technology organized an International Conference on Finite or Infinite Dimensional Complex Analysis and Applications which took place in Hanoi from August 8-12 2001 This conference was the 9th one in a series of conferences which take place alternately in China Japan Korea and Vietnam each year The first one took place at Pusan University in Korea in 1993 The preceding 8 conference was held in Shandong in China in August 2000 The 9th conference of the series was the first one which took place above

mentioned series of conferences in Vietnam Present trends in Complex Analysis reflected in the present volume are mainly concentrated in the following four research directions 1 Value distribution theory including meromorphic functions meromorphic mappings as well as p -adic functions over fields of finite or zero characteristic and its applications 2 Holomorphic functions in several finitely or infinitely many complex variables 3 Clifford Analysis i.e. complex methods in higher dimensional real Euclidean spaces 4 Generalized analytic functions

Arithmetic Algebraic Geometry Brian David Conrad, The articles in this volume are expanded versions of lectures delivered at the Graduate Summer School and at the Mentoring Program for Women in Mathematics held at the Institute for Advanced Study Park City Mathematics Institute The theme of the program was arithmetic algebraic geometry The choice of lecture topics was heavily influenced by the recent spectacular work of Wiles on modular elliptic curves and Fermat's Last Theorem The main emphasis of the articles in the volume is on elliptic curves Galois representations and modular forms One lecture series offers an introduction to these objects The others discuss selected recent results current research and open problems and conjectures The book would be a suitable text for an advanced graduate topics course in arithmetic algebraic geometry

Arithmetic Geometry Jean-Louis Colliot-Thélène, Peter Swinnerton-Dyer, Paul Vojta, 2010-10-27 Arithmetic Geometry can be defined as the part of Algebraic Geometry connected with the study of algebraic varieties through arbitrary rings in particular through non algebraically closed fields It lies at the intersection between classical algebraic geometry and number theory A C I M E Summer School devoted to arithmetic geometry was held in Cetraro Italy in September 2007 and presented some of the most interesting new developments in arithmetic geometry This book collects the lecture notes which were written up by the speakers The main topics concern diophantine equations local global principles diophantine approximation and its relations to Nevanlinna theory and rationally connected varieties The book is divided into three parts corresponding to the courses given by J L Colliot-Thélène Peter Swinnerton-Dyer and Paul Vojta

New Computational Paradigms Barry S. Cooper, Benedikt Löwe, 2005-05-20 This book constitutes the refereed proceedings of the first International Conference on Computability in Europe CiE 2005 held in Amsterdam The Netherlands in June 2005 The 68 revised full papers presented were carefully reviewed and selected from 144 submissions Among them are papers corresponding to two tutorials six plenary talks and papers of six special sessions involving mathematical logic and computer science at the same time as offering the methodological foundations for models of computation The papers address many aspects of computability in Europe with a special focus on new computational paradigms These include first of all connections between computation and physical systems e.g. quantum and analog computation neural nets molecular computation but also cover new perspectives on models of computation arising from basic research in mathematical logic and theoretical computer science
