Gomersall,2013-03-14 In 1981 Robotics Bibliography was published containing over 1 800 references on industrial robot research and development culled from the scientific literature over the previous 12 years It was felt that sensors for use with industrial robots merited a section and accordingly just over 200 papers were included It is a sign of the increased research into sensors in production engineering that this bibliography on both the contact and non contact forms has appeared less than three years after that first comprehensive collection of references appeared In a review in 1975 Professor Warnecke of IPA Stuttgart drew attention to the lack of sensors for touch and vision Since then research workers in various companies universities and national laboratories in the USA the UK Italy Germany and Japan have concentrated on improving sensor capabilities particularly utilising vision artificial intelligence and pattern recognition principles As a result many research projects are on the brink of commercial exploitation and development This bibliography brings together the documentation on that research and development highlighting the advances made in vision systems but not neglecting the development of tactile sensors of various types No bibliography can ever be comprehensive but significant contributions from research workers and production engineers from the major industrialised countries over the last 12 years have been included

sciences disciplines learners are frequently required to visualise and understand complex three dimensional concepts. Consequently it is important that appropriate modalities are used to support their learning. Recently educators have turned to new and existing digital visualisation approaches when adapting to pandemic era challenges and when delivering blended post pandemic teaching. This book focuses on a range of key themes in anatomical and clinically oriented education that can be enhanced through visual understanding of the spatial three dimensional arrangement and structure of human patients. The opening chapters describe important digital adaptations for the dissemination of biomedical education to the public and to learners. These topics are followed by reviews and reports of specific modern visualisation technologies for supporting anatomical biomedical sciences and clinical education. Examples include 3D printing, 3D digital models, virtual histology, extended reality and digital simulation. This book will be of interest to academics, educators and communities aiming to modernise and innovate their teaching. Additionally, this book will appeal to clinical teachers and allied healthcare professionals who are responsible for the training and development of colleagues and those wishing to communicate effectively to a range of audiences using multimodal digital approaches.
