Direct Methods for Sparse Linear Systems Timothy A. Davis, 2006-09-01 The sparse book Everything you wanted to know but never dared to ask about modern direct linear solvers Chen Greif Assistant Professor Department of Computer Science University of British Columbia Overall the book is magnificent It fills a long felt need for an accessible textbook on modern sparse direct methods Its choice of scope is excellent John Gilbert Professor Department of Computer Science University of California Santa Barbara Computational scientists often encounter problems requiring the solution of sparse systems of linear equations Attacking these problems efficiently requires an in depth knowledge of the underlying theory algorithms and data structures found in sparse matrix software libraries Here Davis presents the fundamentals of sparse matrix algorithms to provide the requisite background The book includes CSparse a concise downloadable sparse matrix package that illustrates the algorithms and theorems presented in the book and equips readers with the tools necessary to understand larger and more complex software packages With a strong emphasis on MATLAB and the C programming language Direct Methods for Sparse Linear Systems equips readers with the working knowledge required to use sparse solver packages and write code to interface applications to those packages The book also explains how MATLAB performs its sparse matrix computations Audience This invaluable book is essential to computational scientists and software developers who want to understand the theory and algorithms behind modern techniques used to solve large sparse linear systems The book also serves as an excellent practical resource for students with an interest in combinatorial scientific computing Preface Chapter 1 Introduction Chapter 2 Basic algorithms Chapter 3 Solving triangular systems Chapter 4 Cholesky factorization Chapter 5 Orthogonal methods Chapter 6 LU factorization Chapter 7 Fill reducing orderings Chapter 8 Solving sparse linear systems Chapter 9 CSparse Chapter 10 Sparse matrices in MATLAB Appendix Basics of the C programming language Bibliography Index [Direct Methods for Sparse Linear Systems](#) Joseph M. Elble, 2007 **Iterative Methods for Sparse Linear Systems** Yousef Saad, 2003-01-01 Since the first edition of this book was published in 1996 tremendous progress has been made in the scientific and engineering disciplines regarding the use of iterative methods for linear systems The size and complexity of the new generation of linear and nonlinear systems arising in typical applications has grown Solving the three dimensional models of these problems using direct solvers is no longer effective At the same time parallel computing has penetrated these application areas as it became less expensive and standardized Iterative methods are easier than direct solvers to implement on parallel computers but require approaches and solution algorithms that are different from classical methods Iterative Methods for Sparse Linear Systems Second Edition gives an in depth up to date view of practical algorithms for solving large scale linear systems of equations These equations can number in the millions and are sparse in the sense that each involves only a small number of unknowns The methods described are iterative i e they provide sequences of approximations that will converge to the solution [Krylov Subspace Methods for Linear](#)

Parallel Computing in Optimization A. Migdalas, Panos M. Pardalos, Sverre Storøy, 2013-12-01 During the last three decades breakthroughs in computer technology have made a tremendous impact on optimization In particular parallel computing has made it possible to solve larger and computationally more difficult problems This volume contains mainly lecture notes from a Nordic Summer School held at the Linköping Institute of Technology Sweden in August 1995 In order to make the book more complete a few authors were invited to contribute chapters that were not part of the course on this first occasion The purpose of this Nordic course in advanced studies was three fold One goal was to introduce the students to the new achievements in a new and very active field bring them close to world leading researchers and strengthen their competence in an area with internationally explosive rate of growth A second goal was to strengthen the bonds between students from different Nordic countries and to encourage collaboration and joint research ventures over the borders In this respect the course built further on the achievements of the Nordic Network in Mathematical Programming which has been running during the last three years with the support of the Nordic Council for Advanced Studies NorFA The final goal was to produce literature on the particular subject which would be available to both the participating students and to the students of the next generation
