The authors combine visualization, comprehensibility, and strictness in their material presentation and thus influence the reader towards practical application and learning how to solve real computing problems. They address both key approaches to programming modern computing systems: multithreading based parallelizing in shared memory systems and applying message passing technologies in distributed systems. The book is suitable for undergraduate and graduate students and for researchers and practitioners engaged with high performance computing systems. Each chapter begins with a theoretical part where the relevant terminology is introduced along with the basic theoretical results and methods of parallel programming and concludes with a list of test questions and problems of varying difficulty. The authors include many solutions and hints and often sample code.

Making Mathematics with Needlework Sarah-Marie Belcastro, Carolyn Yackel, 2007-12-12 Mathematical craftwork has become extremely popular and mathematicians and crafters alike are fascinated by the relationship between their crafts. The focus of this book, written for mathematicians, needleworkers, and teachers of mathematics, is on the relationship between mathematics and the fiber arts including knitting, crocheting, cross stitch, and quilting. Each chapter starts with an overview of the mathematics and the needlework at a level understandable to both mathematicians and needleworkers, followed by more technical sections discussing the mathematics, how to introduce the mathematics in the classroom through needlework, and how to make the needlework project including patterns and instructions.
