**Design Energy Simulation for Architects** Kjell Anderson, 2014-01-23 Leading architectural firms are now using in house design simulation to help make more sustainable design decisions Taking advantage of these new tools requires understanding of what can be done with simulation how to do it and how to interpret the results This software agnostic book which is intended for you to use as a professional architect shows you how to reduce the energy use of all buildings using simulation for shading daylighting airflow and energy modeling Written by a practicing architect who specializes in design simulation the book includes 30 case studies of net zero buildings as well as of projects with less lofty goals to demonstrate how energy simulation has helped designers make early decisions Within each case study author Kjell Anderson mentions the software used how the simulation was set up and how the project team used the simulation to make design decisions Chapters and case studies are written so that you learn general concepts without being tied to particular software Each chapter builds on the theory from previous chapters includes a summary of concept level hand calculations if applicable and gives comprehensive explanations with graphic examples Additional topics include simulation basics comfort climate analysis a discussion on how simulation is integrated into some firms and an overview of some popular design simulation software

*Computing the Environment* Brady Peters, Terri Peters, 2018-03-14 Computing the Environment presents practical workflows and guidance for designers to get feedback on their design using digital design tools on environmental performance Starting with an extensive state of the art survey of what top international offices are currently using in their design projects this book presents detailed descriptions of the tools algorithms and workflows used and discusses the theories that underlie these methods Project examples from Transsolar Klimaengineering Buro Happold s SMART Group Behnisch Behnisch Architects Thomas Herzog Autodesk Research are contextualized with quotes and references to key thinkers in this field such as Eric Winsberg Andrew Marsh Michelle Addington and Ali Malkawi

**Assessing the Performance of Passive Houses in Mediterranean Climate Regions** Vincenzo Costanzo, 2020-05-15 This book results from a Special Issue related to the latest progress in the thermodynamics of machines systems and processes since the premonitory work of Carnot Carnot invented his famous cycle and generalized the efficiency concept for thermo mechanical engines Since that time research progressed from the equilibrium approach to the irreversible situation that represents the general case This book illustrates the present state of the art advances after one or two centuries of consideration regarding applications and fundamental aspects The research is moving fast in the direction of economic and environmental aspects This will probably continue during the coming years This book mainly highlights the recent focus on the maximum power of engines as well as the corresponding first law efficiency upper bounds

*Urban Agriculture and City Sustainability* Syngellakis, S., Miralles i Garcia, J. L., 2019-09-18 Papers presented at the 1st International Conference on Urban Agriculture and City Sustainability are contained in this book The research reviews ways in which urban agriculture can contribute to

**People, Planet, Design** Corey Squire, 2023-11-14 If you were asked to close your eyes and envision where you are happiest would you picture somewhere inside a building North Americans are inside buildings for more than 90% of the day Meanwhile the indoors are stifling us sometimes even killing us Buildings and the materials that make them up expose us to materials linked to negative health impacts The construction and operation of buildings is responsible for 40% of climate changing carbon emissions In the US the design choices made by the typical architecture firm employee each year can reduce emissions by about 300 times that of an average American But the promise of sustainable architecture will not be realized if sustainability remains a secondary consideration for architects What if great design were defined by its ability to cool the planet heal communities enhance ecological functioning and advance justice In *People Planet Design* architect Corey Squire builds the case provides the data and lays out the practical tools for a transformative human centered architecture This approach integrates beauty and delight with an awareness of how every design choice impacts the community the planet and the people who will use the building Outcome focused with a deep dive into practical design strategies the book showcases ten building systems that embody design excellence Squire centers the idea that by focusing on the desired outcomes that buildings shelter us from the elements without disconnecting us from the world that buildings provide the quality of air light and views we now know to be essential to health productivity and joy we can move beyond the checklist mentality that has captured much of the design community Essential reading for architects who want to transform what the profession means *People Planet Design* pioneers a new vision and sets readers up with clear guidance on implementing it Only when design prioritizes people as it should can architecture realize its full potential

**SU+RE**, 2018-02-14 In the 21st century architects and engineers are being challenged to produce work that is concurrently sustainable and resilient Buildings need to mitigate their impact on climate change by minimising their carbon footprint while also countering the challenging new weather conditions Globally severe storms extreme droughts and rising sea levels are becoming an increasingly reoccurring feature To respond a design process is required that seeks to

integrate resiliency by building in the capacity to absorb the impacts of these disruptive events and adapt over time to further changes while simultaneously being part of the solution to the problem itself This issue of AD is guest edited by the interdisciplinary team at Stevens Institute of Technology who developed the winning entry for the 2015 US Department of Energy Solar Decathlon competition the SU RE House While particular focus is paid to this student designed and built prototype home the publication also provides a broader discussion of the value of design build as a model for tackling the issue of integrating sustainability and resilience and what changes are required across education policy practice and industry for widespread implementation Contributors include Bronwyn Barry Michael Bruno Alex Carpenter Adam Cohen Ann Holtzman Ken Levenson Brady Peters Terri Peters Karin Stieldorf Alex Washburn Claire Weisz and Graham Wright Featured architects 3XN GXN FXFOWLE Architects Local Office Landscape Architecture LOLA Lateral Office Skidmore Owings Merrill SOM Snohetta Structures Design Build and WXY Studio

*estrategias proyectuales para la iluminación de espacios arquitectónicos* Rafael Villazón, Andrés Pinzón, Andres Sánchez, David Rodríguez, 2018-01-01 Esta publicaci n

propone entender la luz como la materia primordial de la construcción del espacio para lo cual es necesario sintetizar los conceptos técnicos y las herramientas utilizadas para este fin. El texto busca que tanto los estudiantes de arquitectura como los profesionales experimentados comprendan las consideraciones y los procedimientos involucrados en el diseño de sistemas de iluminación natural y artificial a partir de una perspectiva centrada en el uso eficiente de la luz y los dispositivos arquitectónicos que permiten controlarla. El texto y las ilustraciones desarrolladas en esta investigación buscan construir en el estudiante de arquitectura la capacidad intuitiva para manipular la materia a partir de las propiedades de la luz y así afectar positivamente las cualidades del espacio. Para este fin se plantean en cada capítulo diferentes ejemplos y ejercicios de aplicación que desarrollan una aproximación crítica al uso de las diferentes estrategias de iluminación tanto natural como artificial. Este libro es la continuación de la investigación iniciada en *Eficiencia lumínica en arquitectura*. El mayor esfuerzo se concentra en la traducción e ilustración de varios conceptos complejos a un lenguaje sencillo con una visión referida constantemente al proyecto de arquitectura. Además profundiza sobre varios aspectos que en la primera investigación se manejaron a nivel introductorio y mantiene su enfoque didáctico gracias a la inclusión de casos prácticos, tablas de referencia y numerosos ejemplos extraídos de la arquitectura colombiana con lo cual se hace un sencillo homenaje a los arquitectos que han demostrado el carácter material de la luz en su obra.
