Systems Alessandro Mauro, Nicola Massarotti, 2020-01-09 In recent years the interest of the scientific community towards efficient energy systems has significantly increased One of the reasons is certainly related to the change in the temperature of the planet which has increased by 0.76 °C with respect to preindustrial levels according to the Intergovernmental Panel on Climate Change IPCC and is still increasing The European Union considers it vital to prevent global warming from exceeding 2 °C with respect to pre industrial levels as it has been proven that this will result in irreversible and potentially catastrophic changes These changes in climate are mainly caused by greenhouse gas emissions related to human activities and can be drastically reduced by employing energy systems for the heating and cooling of buildings as well as for power production characterized by high efficiency levels and or based on renewable energy sources This Special Issue published in the Energies journal includes 13 contributions from across the world including a wide range of applications such as hybrid residential renewable energy systems desiccant based air handling units heat exchangers for engine WHR solar chimney systems and other interesting topics **Negative Emissions Technologies for Climate Change Mitigation** Steve A.

Rackley, Tingzhen Ming, Wei Li, Michael Tyka, Adrienne Sewel, Diarmaid Clery, George Dowson, Peter Styring, Graham Andrews, Stephen McCord, Pol Knops, Renaud de Richter, 2023-07-14 Negative Emissions Technologies for Climate Change Mitigation provides a comprehensive introduction to the full range of technologies that are being researched developed and deployed in order to transition from our current energy system dominated by fossil fuels to a negative carbon emissions system After an introduction to the challenge of climate change the technical fundamentals of natural and engineered carbon

dioxide removal and storage processes and technologies are described Each NET is then discussed in detail including the key elements of the technology enablers and constraints governance issues and global potential and cost estimates This book offers a complete overview of the field thus enabling the community to gain a full appreciation of NETs without the need to seek out and refer to a multitude of sources Covers the full spectrum of technologies to underpin the transition to a negative emissions energy system from technical fundamentals to the current state of deployment and R D Critically evaluates each technology highlighting advantages limitations and the potential for large scale environmental applications Combines natural science and environmental science perspectives with the practical use of state of the art technologies for sustainability
