Analysis of Engineering Design Studies for Demilitarization of Assembled Chemical Weapons at Blue Grass Army Depot National Research Council, Division on Engineering and Physical

Sciences, Board on Army Science and Technology, Committee on Review and Evaluation of Alternative Technologies for Demilitarization of Assembled Chemical Weapons: Phase II, 2002-10-27 The U S Army is in the process of destroying the nation's stockpile of aging chemical weapons stored at eight locations in the continental United States and on Johnston Atoll in the Pacific. Originally incineration was chosen for the destruction of these stores but this method has met with public opposition and Congress directed the Army to develop alternative technologies for destroying the stockpiles in Pueblo CO and Richmond KY. To assist the Army in this process the NRC was asked to evaluate the engineering design study of the three Blue Grass candidates. This book presents an analysis of various issues pertaining to the proposed engineering design package for the Blue Grass facility.
