Enhanced effects of combined cognitive bias modification and computerised cognitive behaviour therapy on social anxiety

Emma Butler¹, Sirous Mobini^{1,2*}, Ronald M. Rapee¹, Bundy Mackintosh¹ and Shirley A. Reynolds²

Abstract: This study examines whether combined cognitive bias modification for interpretative biases (CBM-I) and computerised cognitive behaviour therapy (C-CBT) can produce enhanced positive effects on interpretation biases and social anxiety. Forty socially anxious students were randomly assigned into two conditions, an intervention group (positive CBM-I + C-CBT) or an active control (neutral CBM-I + C-CBT). At pre-test, participants completed measures of social anxiety, interpretative bias, cognitive distortions, and social and work adjustment. They were exposed to 6 × 30 min sessions of web-based interventions including three sessions of either positive or neutral CBM-I and three sessions of C-CBT, one session per day. At post-test and two-week follow-up, participants completed the baseline measures. A combined positive CBM-I + C-CBT produced less negative interpretations of ambiguous situations than neutral CBM-I + C-CBT. The results also showed that both positive CBM-I + C-CBT and neutral CBM-I + C-CBT reduced social anxiety and cognitive distortions as well as improving work and social adjustment. However, greater effect sizes were observed in the positive CBM-I + C-CBT condition than the control. This indicates that adding positive CBM-I to C-CBT enhanced the training effects on social anxiety, cognitive distortions, and social and work adjustment compared to the neutral CBM-I + C-CBT condition.

ABOUT THE AUTHORS

Authors have been involved in developing the laboratory-based paradigms in modifying cognitive biases in anxiety over a decade. They have published extensively in the area of cognitive bias modification for anxiety disorders, both from a theoretical perspective and applied research.

PUBLIC INTEREST STATEMENT

People with social anxiety tend to interpret ambiguous situations in a negative manner. We developed a computerised treatment (i.e. cognitive bias modification for interpretative biases (CBM-I)) which aims to modify negative interpretations. We combined CBM-I with another treatment method, i.e. computerised cognitive behaviour therapy (C-CBT) and examined the effects of both CBM-I and C-CBT on social anxiety and negative interpretations. The results showed that combining both treatments produced better treatment outcomes.

Buxbaum, 2018 In the years following publication of the DSM 5 R the field of psychiatry has seen vigorous debate between the DSM's more traditional diagnosis oriented approach and the NIMH's more biological dimension based RDoC research domain criteria approach Charney Nestler's Neurobiology of Mental Illness is an authoritative foundation for translating information from the laboratory to clinical treatment and its fifth edition extends beyond this reference function to acknowledge and examine the controversies different camps and thoughts on the future of psychiatric diagnosis In this wider context this book provides information from numerous levels of analysis including molecular biology and genetics cellular physiology neuroanatomy neuropharmacology epidemiology and behavior Sections and chapters are edited and authored by experts at the top of their fields No other book distills the basic science and underpinnings of mental disorders and highlights practical clinical significance to the scope and breadth of this classic text In this edition Section 1 which reviews the methods used to examine the biological basis of mental illness in animal and cell models and in humans has been expanded to reflect critically important technical advances in complex genetics including powerful sequencing technologies and related bioinformatics epigenetics stem cell biology optogenetics neural circuit functioning cognitive neuroscience and brain imaging This range of established and emerging methodologies offer groundbreaking advances in our ability to study the brain as well as unique opportunities for the translation of preclinical and clinical research into badly needed breakthroughs in our therapeutic toolkit Sections 2 through 7 cover the neurobiology and genetics of major psychiatric disorders psychoses including bipolar disorder mood disorders anxiety disorders substance use disorders dementias and disorders of childhood onset Also covered within these sections is a summary of current therapeutic approaches for these illnesses as well as the ways in which research advances are now guiding the search for new treatments Each of these parts has been augmented in several different areas as a reflection of research progress The last section Section 8 reconfigured in this new edition now focuses on diagnostic schemes for mental illness This includes an overview of the unique challenges that remain in diagnosing these disorders given our still limited knowledge of disease etiology and pathophysiology The section then provides reviews of DSM 5 R which forms the basis of psychiatric diagnosis in the United States for all clinical work and of RDoC which provides an alternative perspective on diagnosis in heavy use in the research community Also included are chapters on future efforts toward precision and computational psychiatry which promise to someday align diagnosis with underlying biological abnormalities

Interpretational Processing Biases in Emotional Psychopathology Marcella L. Woud, 2023-03-28 The primary aim of this book is to bridge the gap between lab based and clinical research by disseminating the latest interdisciplinary scientific findings on interpretational processing biases in the context of emotional psychopathology It is designed to help the practitioner by drawing explicit links between the basic science and implications

for clinical practice This enables an enhanced interaction between science and practice strengthening bi directional translational links and the potential to produce more meaningful and significant advances in the treatment of emotional psychopathology This in turn will facilitate an innovative step change in the area of both research and clinical practice The book focuses on cognitive processing biases that are common across a wide range of psychological disorders meaning that the conclusions drawn have relevance across the whole spectrum of psychopathology and will stimulate and inspire a broad range of discussions and future work From the foreword by Nikolaos Kazantzis The practice of CBT is complex and requires a tailored approach Every technique has a specific target but may be used for multiple purposes simultaneously in support of the client s therapeutic goals The purpose of Dr Woud s book is to elucidate the ways in which interpretational biases can be a focus of intervention for CBT therapists at all stages of professional development from those undertaking training to master clinicians Dr Woud has succeeded admirably in this regard

Palermo, Massimo Bartoli, 2020-04-22 Inhibitory control is a critical neurocognitive skill for navigating cognitive social and emotional challenges It rapidly increases during the preschool period and is important for early cognitive development as it is a crucial component of executive functioning self regulation and impulsivity Inhibitory control training ICT is a novel intervention in which participants learn to associate appetitive cues with inhibition of behavior It is being considered a promising approach in the treatment of psychopathology and appetitive behaviors This book aims to bring together knowledge on the topic considering research clinic and forensic field of intervention Indeed this book can be considered an excellent synopsis of perspectives methods empirical evidence and international references Towards an Understanding of the Cognitive Mechanisms Involved in Threat Processing and Perception Andras Norbert Zsido, Carlos M. Coelho, David S. March, Michael Craig Hout, Jakub Polák, 2024-06-05 Much remains unknown about the cognitive mechanisms and information processing biases involved in threat detection or the acquisition and maintenance of threat associations To complicate the picture these mechanisms and biases likely differ between various types of threats e g those originating from animals weapons social situations or groups There has been a recent push to highlight ways of improving methods used in research in this area which has likewise prompted theoretical revisions It is therefore important to continue clarifying the cognitive mechanism e g perception attention memory learning underlying threat processing to develop a better understanding of how they affect social outcomes For example very little is known about how social identity hierarchy group structure and other social cues affect our responses in threatening situations As the social environment impacts our daily psychological functioning one might suspect it has an important role in threat processing as well **Neurobiology of Mental Illness** Dennis S. Charney, Joseph D. Buxbaum, Pamela Sklar, Eric J. Nestler, 2013-07-04 Our understanding of the neurobiological basis of psychiatric disease has accelerated in the past five years The fourth edition of Neurobiology of Mental Illness has been completely revamped given these advances and discoveries on the neurobiologic foundations of psychiatry Like its predecessors the book begins with an overview of the basic science The emerging technologies in Section 2 have been extensively redone to match the progress in the field including new chapters on the applications of stem cells optogenetics and image guided stimulation to our understanding and treatment of psychiatric disorders Sections 3 through 8 pertain to the major psychiatric syndromes the psychoses mood disorders anxiety disorders substance use disorders dementias and disorders of childhood onset Each of these sections includes our knowledge of their etiology pathophysiology and treatment The final section discusses special topic areas including the neurobiology of sleep resilience social attachment aggression personality disorders and eating disorders In all there are 32 new chapters in this volume including unique insights on DSM 5 the Research Domain Criteria RDoC from NIMH and a perspective on the continuing challenges of diagnosis given what we know of the brain and the mechanisms pertaining to mental illness This book provides information from numerous levels of analysis including molecular biology and genetics cellular physiology neuroanatomy neuropharmacology epidemiology and

behavior In doing so it translates information from the basic laboratory to the clinical laboratory and finally to clinical treatment No other book distills the basic science and underpinnings of mental disorders and explains the clinical significance to the scope and breadth of this classic text The result is an excellent and cutting edge resource for psychiatric residents psychiatric researchers and doctoral students in neurochemistry and the neurosciences The neurobiology of emotion-cognition interactions Hadas Okon-Singer, Luiz Pessoa, Alexander J. Shackman, 2015-06-12 There is increasing interest in understanding the interplay of emotional and cognitive processes The objective of the Research Topic was to provide an interdisciplinary survey of cutting edge neuroscientific research on the interaction and integration of emotion and cognition in the brain The following original empirical reports commentaries and theoretical reviews provide a comprehensive survey on recent advances in understanding how emotional and cognitive processes interact how they are integrated in the brain and what their implications for understanding the mind and its disorders are These works encompasses a broad spectrum of populations and showcases a wide variety of paradigms measures analytic strategies and conceptual approaches The aim of the Topic was to begin to address several key questions about the interplay of cognitive and emotional processes in the brain including what is the impact of emotional states anxiety and stress on various cognitive functions How are emotion and cognition integrated in the brain Do individual differences in affective dimensions of temperament and personality alter cognitive performance and how is this realized in the brain Are there individual differences that increase vulnerability to the impact of affect on cognition who is vulnerable and who resilient How plastic is the interplay of cognition and emotion Taken together these works demonstrate that emotion and cognition are deeply interwoven in the fabric of the brain suggesting that widely held beliefs about the key constituents of the emotional brain and the cognitive brain are fundamentally flawed Developing a deeper understanding of the emotional cognitive brain is important not just for understanding the mind but also for elucidating the root causes of its many debilitating disorders
