largely sparked by its galloping economy As a measure of its seriousness to reduce the environmental impacts it has spearheaded numerous policy initiatives One of the major thrusts of the proposed initiatives to curb environmental degradation has been to create an informed and well educated citizenry The federal mandates have triggered new curriculum policies and the compulsory teaching of environmental and sustainability education at all levels in all education institutions This volume examines the policy practice conundrum It looks at how national and international policy reforms reach practitioners in this case teacher educators Furthermore it unravels how teacher educators understand environmental education the ways in which they negotiate its demands on their busy schedules what helps them in determining relevant issues within this and finally how they implement these policies in their everyday practices It is evident from this book that while there have been some really well meaning development of policies their impact on teacher educators practice and therefore student teachers learning about Environmental Education is limited The study showed that while these teacher educators had a clear understanding of the environment and saw the need importance of incorporating Environmental Education in their daily practices they had very little scope to do so There were numerous factors that constrained implementation The book provides inputs on global policy practice gaps It offers valuable insights to a global audience grappling with understanding the ways in which environmental education policies are put into practice in emerging economies like India The final argument is thesis that while policy reforms are a step in the right direction they need to be backed up with strong implementation systems in order to be successful div *Environment & Ecology* R.

Mikroplastik im Wasserkreislauf Jekel, Martin,Dittmar, Stefan,Ruhl, Aki Sebastian,Anger, Philipp,Bannick, Claus Gerhard,Barthel, Anne-Kathrin,Braun, Ulrike,Braunbeck, Thomas,Eisentraut, Paul,Elsner, Martin,Gnirß, Regina,Grummt, Tamara,Hanslik, Lisa,Huppertsberg, Sven,Ivleva, Natalia P.,Klöckner, Philipp,Knepper, Thomas P.,Köhler, Heinz-R.,Krais, Stefanie,Kuckelkorn, Jochen,May, Elisabeth,Müller, Yanina Katharina,Nießner, Reinhard,Obermaier, Nathan,Oehlmann, Jörg,Pittroff, Marco,Reemtsma, Thorsten,Schmiege, Hannah,Schmitt, Thomas,Schür, Christoph,Storck, Florian Rüdiger,Strobel, Claudia,Triebskorn, Rita,Wagner, Martin,Wagner, Stephan,Witzig, Cordula Sonja,Zumbülte, Nicole,2020-11-03 Das interdisziplinäre Forschungsprojekt MiWa widmete sich grundlegenden Fragestellungen zur Analytik und Wirkung von Mikroplastik Partikeln im Wasserkreislauf Es wurden Methoden der Umweltprobennahme der Probenaufbereitung und verschiedene Detektionsverfahren zur Charakterisierung und Quantifizierung von Mikroplastik intensiv untersucht miteinander verglichen und weiterentwickelt ko und humantoxikologische Untersuchungen dienten dem Zweck die potenziell von Mikroplastik ausgehende Gefährdung für die aquatische Umwelt und den Menschen zu analysieren und zu bewerten Eine Harmonisierung und Standardisierung von Methoden der Probennahme Probenaufbereitung und

Mikroplastik Detektion sind trotz der erheblichen Fortschritte derzeit nur teilweise möglich. Die kotoxikologischen Studien zeigen zwar die Aufnahme von Mikroplastik Partikeln durch einige Organismen, jedoch konnte bisher keine schädigende Wirkung nachgewiesen werden. Dabei wurden für eine Auswahl aquatischer Modellspezies sowohl Szenarien direkter als auch indirekter Exposition innerhalb einer Nahrungskette betrachtet. Interaktionen mit menschlichen Modellzellen wurden bislang nur bei Mikroplastik Partikeln mit Größen weit unterhalb von 1 µm also Nanoplastik beobachtet. Eine umfassende Bewertung ist bislang nicht möglich. The interdisciplinary research project MiWa focused on principle knowledge gaps of analytical detection and effects of microplastic in fresh water cycles. Methods for environmental sampling, sample preparation and different analytical identification and quantification were intensively investigated, compared and further developed. Toxicological studies were conducted to assess potential risks of microplastic particles towards the environment and human health. Harmonization and standardization are still only partially possible despite various improvements. The ecotoxicological experiments confirmed the intake of microplastic particles by different organisms, but no hazardous effects could be found. Both direct ingestions and indirect exposition within food webs were tested. Interactions with exemplary human cells were only observed for particle sizes far below 1 µm, thus nanoplastic. An assessment is currently only possible to a limited extent.
