Global Problems, Smart Solutions Bjørn Lomborg, 2013-11-14 A high profile thought experiment asks leading scholars to make cases for spending additional aid money to combat major world problems

The Skeptical Environmentalist Bjørn Lomborg, 2001-08-30 The Skeptical Environmentalist challenges widely held beliefs that the environmental situation is getting worse and worse The author himself a former member of Greenpeace is critical of the way in which many environmental organisations make selective and misleading use of the scientific evidence Using the best available statistical information from internationally recognised research institutes Bjørn Lomborg systematically examines a range of major environmental problems that feature prominently in headline news across the world His arguments are presented in non technical accessible language and are carefully backed up by over 2500 footnotes allowing readers to check sources for themselves Concluding that there are more reasons for optimism than pessimism Bjørn Lomborg stresses the need for clear headed prioritisation of resources to tackle real not imagined problems The Skeptical Environmentalist offers

readers a non partisan stocktaking exercise that serves as a useful corrective to the more alarmist accounts favoured by campaign groups and the media

Our Threatened Planet Emmanuel Kenneth, 2020-05-27 If extinctions are part of nature's course then why does it matter that so many species are becoming extinct now Over the long course of man's occupancy on Earth has been seemingly characterised by its dependence on nature and the ecology which has overtime greatly influenced homeostatic regulation i.e. balance of nature where clearly nature's capacity to support man's existence has plummeted with the release of obnoxious chemicals into the environment It is pertinent to note that all species while evolving and adapting to the demands of their habitats or modernization exigencies changes dramatically subjecting the ecologies which happen to be the fabric of life to the dynamic swirl of physical forces and of rapid decline of species diversity If we continue to lose large and vital portions of the natural world to extinction of species and other criticalities we humans would be able to cope but plants and animals may not be able to adapt to most of these changes and as a result may die and become extinct resulting in a break in food chain A considerable attempt has been made through this book to explicitly cover these emerging concerns or topics in a consolidated form which will provide effective understanding of environmental problems currently being faced in different world regions and perhaps not just to give the reader a fair knowledge about the huge role the ecology has in the survival of species and existence of man but to provide the extent to which the state of dynamic equilibrium from nature will deprive the generations yet unborn the right to clean and healthy environment and harmony with nature
