   Equivariant Cohomology Theories Glen E. Bredon,2006-11-14 a   **Diagram Cohomology and Isovariant Homotopy Theory** Giora Dula,Reinhard Schultz,1994 Obstruction theoretic methods are introduced into isovariant homotopy theory for a class of spaces with group actions the latter includes all smooth actions of cyclic groups of prime power order The central technical result is an equivalence between isovariant homotopy and specific equivariant homotopy theories for diagrams under suitable conditions This leads to isovariant Whitehead theorems an obstruction theoretic approach to isovariant homotopy theory with obstructions in cohomology groups of ordinary and equivalent diagrams and qualitative computations for rational homotopy groups of certain spaces of isovariant self maps of linear spheres The computations show that these homotopy groups are often far more complicated than the rational homotopy groups for the corresponding spaces of equivariant self maps Subsequent work will use these computations to construct new families of smooth actions on spheres that are topologically linear but differentiably nonlinear   **Equivariant Cohomology of Configuration Spaces Mod 2** Pavle V. M. Blagojević,Frederick R. Cohen,Michael C. Crabb,Wolfgang Lück,Günter M. Ziegler,2022-01-01 This book gives a brief treatment of the equivariant cohomology of the classical configuration space F R d n from its beginnings to recent developments This subject has been studied intensively starting with the classical papers of Artin 1925 1947 on the theory of braids and progressing through the work of Fox and Neuwirth 1962 Fadell and Neuwirth 1962 and Arnol d 1969 The focus of this book is on the mod 2 equivariant cohomology algebras of F R d n whose additive structure was described by Cohen 1976 and whose algebra structure was studied in an influential paper by Hung 1990 A detailed new proof of Hung s main theorem is given however it is shown that some of the arguments given by him on the way to his result are incorrect as are some of the intermediate results in his paper This invalidates a paper by three of the authors Blagojevi L ck and Ziegler 2016 who used a claimed intermediate result in order to derive lower bounds for the existence of k regular and l skew embeddings Using the new proof of Hung s main theorem new lower bounds for the existence of highly regular embeddings are obtained Some of them agree with the previously claimed bounds some are weaker Assuming only a standard graduate background in algebraic topology this book carefully guides the reader on the way into the subject It is aimed at graduate students and researchers interested in the development of algebraic topology in its applications in geometry   Supergroupoids, Double Structures, and Equivariant Cohomology Rajan Amit Mehta,2006   *Equivariant Homotopy and Cohomology Theory* J. Peter May,M. Cole,1996 This volume introduces equivariant homotopy homology and cohomology theory along with various related topics in modern algebraic topology It explains the main ideas behind some of the most striking recent advances in the subject The works begins with a development of the equivariant algebraic topology of spaces culminating in a discussion of the Sullivan conjecture that emphasizes its relationship with classical Smith theory The book then introduces equivariant stable homotopy theory the equivariant stable homotopy category and the most

important examples of equivariant cohomology theories The basic machinery that is needed to make serious use of equivariant stable homotopy theory is presented next along with discussions of the Segal conjecture and generalized Tate cohomology Finally the book gives an introduction to brave new algebra the study of point set level algebraic structures on spectra and its equivariant applications Emphasis is placed on equivariant complex cobordism and related results on that topic are presented in detail   *Cohomology Theory of Topological Transformation Groups* W.Y. Hsiang,2012-12-06 Historically applications of algebraic topology to the study of topological transformation groups were originated in the work of L E 1 Brouwer on periodic transformations and a little later in the beautiful fixed point theorem ofP A Smith for prime periodic maps on homology spheres Upon comparing the fixed point theorem of Smith with its predecessors the fixed point theorems of Brouwer and Lefschetz one finds that it is possible at least for the case of homology spheres to upgrade the conclusion of mere existence or non existence to the actual determination of the homology type of the fixed point set if the map is assumed to be prime periodic The pioneer result of P A Smith clearly suggests a fruitful general direction of studying topological transformation groups in the framework of algebraic topology Naturally the immediate problems following the Smith fixed point theorem are to generalize it both in the direction of replacing the homology spheres by spaces of more general topological types and in the direction of replacing the group tl by more general compact groups   **The Floer Memorial Volume** Helmut Hofer,Clifford H. Taubes,Alan Weinstein,Eduard Zehnder,2012-12-06 Andreas Floer died on May 15 1991 an untimely and tragic death His visions and far reaching contributions have significantly influenced the developments of mathematics His main interests centered on the fields of dynamical systems symplectic geometry Yang Mills theory and low dimensional topology Motivated by the global existence problem of periodic solutions for Hamiltonian systems and starting from ideas of Conley Gromov and Witten he developed his Floer homology providing new powerful methods which can be applied to problems inaccessible only a few years ago This volume opens with a short biography and three hitherto unpublished papers of Andreas Floer It then presents a collection of invited contributions and survey articles as well as research papers on his fields of interest bearing testimony of the high esteem and appreciation this brilliant mathematician enjoyed among his colleagues Authors include A Floer V I Arnold M Atiyah M Audin D M Austin S M Bates P J Braam M Chaperon R L Cohen G Dell Antonio S K Donaldson B D Onofrio I Ekeland Y Eliashberg K D Ernst R Finthushel A B Givental H Hofer J D S Jones I McAllister D McDuff Y G Oh L Polterovich D A Salamon G B Segal R Stern C H Taubes C Viterbo A Weinstein E Witten E Zehnder   **Rational S^1-Equivariant Stable Homotopy Theory** John Patrick Campbell Greenlees,1999 The memoir presents a systematic study of rational S1 equivariant cohomology theories and a complete algebraic model for them It provides a classification of such cohomology theories in simple algebraic terms and a practical means of calculation The power of the model is illustrated by analysis of the Segal conjecture the behaviour of the Atiyah Hirzebruch spectral sequence the structure of S1 equivariant K theory and the rational behaviour of cyclotomic

spectra and the topological cyclic homology construction **Ergodic Theory of Equivariant Diffeomorphisms: Markov Partitions and Stable Ergodicity** Mike Field,Matthew Nicol,2004 On the assumption that the Gamma orbits all have dimension equal to that of Gamma this title shows that there is a naturally defined F and Gamma invariant measure nu of maximal entropy on Lambda it is not assumed that the action of Gamma is free Equivariant Orthogonal Spectra and S-Modules M. A. Mandell,J. Peter May,2002 The last few years have seen a revolution in our understanding of the foundations of stable homotopy theory Many symmetric monoidal model categories of spectra whose homotopy categories are equivalent to the stable homotopy category are now known whereas no such categories were known before 1993 The most well known examples are the category of S modules and the category of symmetric spectra We focus on the category of orthogonal spectra which enjoys some of the best features of S modules and symmetric spectra and which is particularly well suited to equivariant generalization We first complete the nonequivariant theory by comparing orthogonal spectra to S modules We then develop the equivariant theory For a compact Lie group G we construct a symmetric monoidal model category of orthogonal G spectra whose homotopy category is equivalent to the classical stable homotopy category of G spectra We also complete the theory of S_G modules and compare the categories of orthogonal G spectra and S_G modules A key feature is the analysis of change of universe change of group fixed point and orbit functors in these two highly structured categories for the study of equivariant stable homotopy theory **The Diverse World of PDEs** I. S. Krasil'shchik,A. B. Sossinsky,A. M. Verbovetsky,2023-08-23 This volume contains the proceedings of the Alexandre Vinogradov Memorial Conference on Diffieties Cohomological Physics and Other Animals held from December 13 17 2021 at Independent University of Moscow and Moscow State University Moscow Russia The papers reflect the modern interplay between partial differential equations and various aspects of algebra and computer science The topics discussed are relations between integrability and differential rings supermanifolds differential calculus over graded algebras noncommutative generalizations of PDEs quantum vector fields generalized Nijenhuis torsion cohomological approach to the geometry of differential equations the argument shift method Fr licher structures in the formal Kadomtsev Petviashvili hierarchy and computer based determination of optimal systems of Lie subalgebras The companion volume Contemporary Mathematics Volume 788 is devoted to Geometry and Mathematical Physics Equivariant E-Theory for C^*-Algebras Erik Guentner,Nigel Higson,Jody Trout,2000 This title examines the equivariant e theory for c algebra focusing on research carried out by Higson and Kasparov Let A and B be C algebras which are equipped with continuous actions of a second countable locally compact group G We define a notion of equivariant asymptotic morphism and use it to define equivariant E theory groups EULG A B which generalize the E theory groups of Connes and Higson We develop the basic properties of equivariant E theory including a composition product and six term exact sequences in both variables and apply our theory to the problem of calculating K theory for group C algebras Our main theorem gives a simple criterion for the assembly map of Baum and

Connes to be an isomorphism The result plays an important role in the work of Higson and Kasparov on the Bau m Connes conjecture for groups which act isometrically and metrically properly on Hilbert space **Splitting Theorems for Certain Equivariant Spectra** L. Gaunce Lewis,2000 This book is intended for graduate students and research mathematicians interested in algebraic topology *Equivariant Analytic Localization of Group Representations* Laura Ann Smithies,2001 This book is intended for graduate students and research mathematicians interested in topological groups Lie groups category theory and homological algebra **Notices of the American Mathematical Society** American Mathematical Society,1991 Equivariant, Almost-Arborescent Representations of Open Simply-Connected 3-Manifolds; A Finiteness Result Valentin Poenaru,C.
