**Human Factors in Product Design** W. Green, Patrick W. Jordan, 1999-08-19 Manufacturers are becoming more aware of human factors in product design as a major competitive issue In many product areas manufacturers have reached a technology ceiling which simply means that it is increasingly difficult to get ahead of the competition in terms of for example functionality technical reliability or manufacturing costs As a consequence design has become a major battleground for manufacturers and usability is recognized as being a central tenet of good design This book provides a unique snapshot of current practice in human factors identifying methods and techniques that work well under tight constraints and providing case study evidence of their effectiveness The commercial implications of usability are discussed and special attention is paid to two key trends inclusive design and smart products Inclusive design is about meeting the needs of all users with one design which includes the elderly and the disabled Smart products are multi functional products with electronic interfaces containing a vast array of helpful functions Industrial designers and manufacturing executives will find this text enlightening

McCabe, 2018-06-28 The broad and developing scope of ergonomics has been illustrated over the past fifteen years by the books that make up the Contemporary Ergonomics series Presenting the proceedings of the Ergonomics Society's annual conference the series embraces the wide range of topics covered by ergonomics Individual papers provide insight into current practice

**Advances in Occupational Ergonomics and Safety** Shrawan Kumar, 1998 Ergonomics touches every man woman and child each day of their lives whether they recognise it or not Ergonomics or lack of it plays a more significant role in the lives of about two thirds of the world's population over 10 years of age who work for one third of their lives to make a living There are 120

million occupational accidents and injuries and 200 000 fatalities each year according to WHO 95 Occupational accidents injuries and fatalities are undesired events The occupational activities are planned and designed and executed with a purpose under supervision but accidents are not Hence it stands to reason that better planning design and execution will help to reduce these undesirable outcomes One must also recognise that under global scheme of biological evolution the human beings were not designed to endure a life long exposure to artificial activities repetitively Thus occupational health problems are inevitable if we do not return to nature for our sustenance As a society we have chosen to live and work as we do In fact there is a far rapid evolution mutation and speciation of occupations than of any biological organism This places us in a situation where better planning design and execution of our occupational activities have become absolute necessity However since ergonomics is a modifier and not a causal factor its significance does not become immediately apparent to us Perhaps it is for this reason that even in developed world occupational health services are available to between 20% to 50% of the work force and less than 10% of the workforce in the developing countries Occupational health services are remedial approaches The rational wisdom of the human race should strive to get proactive control of undesirable outcomes through ergonomics Unfortunately it is sadly lacking even today On an optimistic note one can observe that its presence and application is slowly increasing
