Ertms Etc's Functional Statements:

Information Ergonomics Michael Stein, Peter Sandl, 2012-03-30 The variety and increasing availability of hypermedia information systems which are used in stationary applications like operators consoles as well as mobile systems e.g. driver information and navigation systems in automobiles form a foundation for the mediatization of the society. From the human engineering point of view, this development and the ensuing increased importance of information systems for economic and private needs require careful deliberation of the derivation and application of ergonomics methods, particularly in the field of information systems. This book consists of two closely intertwined parts. The first theoretical part defines the concept of an information system, followed by an explanation of action regulation as well as cognitive theories to describe man-information system interaction. A comprehensive description of information ergonomics concludes the theoretical approach. In the second, practically oriented part of this book, authors from industry as well as from academic institutes illustrate the variety of current information systems taken from different fields of transportation, i.e. aviation, automotive and railroad. The reader thus gains an overview of various applications and their context of use as well as similarities and differences in design. This does not only include a description of the different information systems but also places them in the context of the theories and models which were presented in the first part of this book.

Functional Safety and Proof of Compliance Thor Myklebust, Tor Stålhanne, 2022-01-03 This book aims to facilitate and improve development work related to all documents and information required by functional safety standards. Proof of Compliance (PoC) is important for the assessor and certification bodies when called up to confirm that the manufacturer has developed a software system according to the required safety standards. While PoC documents add functionality to the product, neither for the developer nor for the customer, they do add confidence and trust to the product and ease certification and, as such, are important for the product's value. In spite of this added value, the documentation needed for PoC is often developed late in the project and in a haphazard manner. This book aims at developers, assessors, certification bodies and purchasers of safety instrumented systems and informs the reader about the most important PoC documents. A typical PoC documentation encompasses 50 to 200 documents, several of which are named in the safety standards, e.g. 82 documents in IEC 61508, 2010 series, 101 documents in EN 5012X series and 106 work products in ISO 26262, 2018 series. These documents also include further references, typically one to twenty of them, and the total number of pages developed by the manufacturer varies between 2000 and 10000 pages. The book provides guidance and examples of what to include in the relevant plans and documents.

Computers in Railways XIV C. A. Brebbia, N. Tomii, P. Tzieropoulos, J. M. Mera, 2014-06-01 This book contains the 14th proceedings of the very successful International conference on Railway Engineering Design and Optimization (COMPRAIL 2014) which began in 1987.

Intelligent Transportation Systems - Problems and Perspectives Aleksander Śladkowski, Wiesław Pamuła, 2015-06-24 This book presents a discussion of problems encountered in the deployment of Intelligent Transport Systems (ITS). It puts emphasis on the early tasks of

designing and proofing the concept of integration of technologies in Intelligent Transport Systems In its first part the book concentrates on the design problems of urban ITS The second part of the book features case studies representative for the different modes of transport These are freight transport rail transport and aerospace transport encompassing also space stations The book provides ideas for deployment which may be developed by scientists and engineers engaged in the design of Intelligent Transport Systems It can also be used in the training of specialists students and post graduate students in universities and transport high schools

GNSS for Rail Transportation Letizia Lo Presti,Salvatore Sabina,2018-04-20 This book proposes a general methodology to introduce Global Navigation Satellite System GNSS integrity starting from a rigorous mathematical description of the problem It highlights the major issues that designers need to resolve during the development of GNSS based systems requiring a certain level of confidence on the position estimates Although it follows a general approach the final chapters focus on the application of GNSS integrity to rail transportation as an example By describing the main requirements in the context of train position function one of which is the safe function of any train control system it shows the critical issues associated with the concept of safe position integrity In particular one case study clarifies the key differences between the avionic domain and the railway domain related to the application of GNSS technologies and identifies a number of railway signaling hazards linked with the use of such technology Furthermore it describes various railway signaling techniques to mitigate such hazards to prepare readers for the future evolution of train control systems also based on the GNSS technology This unique book offers a valuable reference guide for engineers and researchers in the fields of satellite navigation and rail transportation

Operating Rules and Interoperability in Trans-National High-Speed Rail Simon Collart-Dutilleul,2021-07-29 This book examines the problem of interoperability related to operating rules and gives an overview of the formal method approaches related to this subject The book examines the interoperability issues concerning implementation of European Rail Traffic Management System ERTMS while crossing a boarder It also looks at the implementing of the ERTMS and provides solutions regarding operating rules for ERTMS lines using formal methods and simulation tools The contributors will also discuss operating rule validation and formal methods for safety assessment
