Quantitative and Qualitative Research is a retrospective of the author's research that led to receiving the 2013 Distinguished Contributions Award to Science Education through Research. This book includes selected articles that document changes in her research approaches and theoretical frameworks. The articles represent the evolution of her thinking about the issue of girls in science as well as her impact on science education. The author's work is placed in the context of science education research at the time of publication, research in education and psychology, and the culture of the times. She pulls back the curtain that often makes the messy work of research seem straightforward and linear to reveal why she did the research and the methodological decisions she faced. She describes the serendipitous nature of some of the work as well as her frustrations in trying to understand data and struggles to ensure that she accurately and respectfully presented the voices of girls and their teachers. The book also includes some of the earliest research in engineering education preceding the focus on engineering practices found in the Next Generation Science and Engineering Standards. Understanding Girls provides insights into why girls may or may not decide to participate in science and engineering and what can be done to increase their participation. It provides evidence that we have increased girls' participation and the challenges that remain to ensure that every girl who wants to become a scientist or engineer has the opportunity to do so.

Spark a Revolution in Early Education

Rae Pica, 2022-11-22

Join the revolution in early childhood education. Early childhood educators are facing a crucial inflection point in the profession. Active learning for the whole child has been increasingly ignored by early childhood education decision makers. Research shows that children need movement and play and joy to learn to their fullest potential, yet the educational system pushes worksheets and takes away time outdoors among many other harmful and developmentally inappropriate teaching practices. Educators everywhere are tired of witnessing unrealistic expectations and impossible attempts to accelerate child development, stripping children of authentic learning and their giggles. They are disturbed by the inequities that exist in education and want to see every child provided with the good foundation a quality early education can supply. They are fed up with the nonsense depriving children of childhood, requiring them to teach in ways that they know aren't right. Without an understanding of child development guiding ECE policies, children have lost their love of learning and play and face growing health issues. This book challenges and inspires early childhood professionals to advocate for change in the field while giving them the research underpinnings and tools they need to take real action and bring back active play-based learning for the development and education of the whole child. Including chapters on debunking myths in early childhood education, advocacy basics, and strategies for speaking up, it dispels the fears associated with speaking up and banishes all doubts about the need to advocate bravely and widely, proving the need to change course and providing practical and actionable steps for speaking to decision makers and convincing them to pursue change.

Spark a Revolution in Early Education busts four myths: earlier is better; children learn by sitting; digital devices are important to learning; and play time is not productive time to push for. Rae's Revolution and get educators everywhere to stand up for the children.
