Resonance , Architecture and Silence Christos P. Kakalis, 2019-08-23 This book explores the role of silence in how we design present and experience architecture Grounded in phenomenological theory the book builds on historical theoretical and practical approaches to examine silence as a methodological tool of architectural research and unravel the experiential qualities of the design process Distinct from an entirely soundless experience silence is proposed as a material condition organically incorporated into the built and natural landscape Kakalis argues that either human or atmospheric silence is a condition of waiting for a sound to be born or a new spatio temporal event to emerge In silence therefore we are attentive and attuned to the atmosphere of a place The book unpacks a series of stories of silence in religious topographies urban landscapes film and theatre productions and architectural education with contributed chapters and interviews with Jeff Malpas and Alberto Perez Gomez Aimed at postgraduate students scholars and researchers in architectural theory it shows how performative and atmospheric qualities of silence can build a new understanding of architectural experience
