**Abstract:** Plant kingdom represents a massive reservoir of biologically active compounds. Around 60% of the drugs used in medicine are of obtained from plant origin. It is important to use phytochemical methods to screen and analyse biological active components and their therapeutic mechanisms. *Areca catechu* Linn also known as areca nut is one of the stimulant masticatory crude materials of Indian system of medicine. *Piper betel* L. also known as betel leaves contains large number of biomolecules which are used for treating cough and foul smelling in mouth. In this present work demonstrated on phytochemical screening of the aqueous extracts of betel nut and betel leaf were screened by using standard methods. The aqueous extract were prepared at 15 min by simple technique. Preliminary phytochemical screening of betel nut and betel leaves showed the presence of active compound in the aqueous extract. The positive result for the presence of alkaloids, saponins, phenol, reducing sugar, triterpenoids and glycosides substance observed in aqueous extract of betel nut. The aqueous extract of betel leaves showed the presence of preliminary phytochemical such as alkaloids, saponins, coumarin and glycosides substance.

**Keywords:** phytochemical analysis, betel nut, betel leaf, medicinal plant.

### 1. INTRODUCTION

Plant materials are used throughout the world as home remedies, over the counter drug products and raw substances for the pharmaceutical industry, cosmetics industry and represent a substantial proportion of the world drug market. It is therefore significant to establish their quality. In this study we selected a widely available plant material such as betel nut and betel leaf. India is one of the largest populated countries in the world and it has eight different geographical zones. Recent study revealed that the *Areca catechu* extract increases learning and memory (Madhusudan et al., 2012). In rural India, the consumption of betel nut (*Areca nut*) with betel leaf is common practice. *Areca nut* (*Areca catechu*) popularly known as "betel nut", is one of the oldest known masticatories amongst Asia (Trease and Evan, 2009). Betel nut contains numerous medicinally active compounds it was cited

for the medicinal properties, specially antibacterial and antiviral activity (Reena et al., 2009; Sastry, 2005).

Over 100 varieties of *Piper betel* has been distributed in both of the hemispheres of world of these 40 species have been recorded in India. The parts of *Piper betel* utilized, are leaves, roots, stems, stalks and fruits. The deep green heart shaped leaves of betel vine are popularly known as *Pann*, in India and *vetrilai* in Tamilnadu. The leaf juice is used for fever, cough, fatigue, asthma, to disinfect wounds externally (Rai et al., 2011). A preliminary study has reported *Piper betel* leaves extracts contains large numbers of bioactive molecules like polyphenols, alkaloids, steroids, saponins and tannins (Koff et al., 1971). Shun et al. (2007) study indicated the leaves extract of *Piper betel* exhibit biological capabilities of detoxication, anti-oxidation and anti-

E Sreejith, M. Sabu, Banana is one of the most common and widely used food all over the universe from ancient time In this work mainly the nutrition analysis of various commonly cultivated banana varieties in Kerala has been used such as Najalipoovan Poovan Etha Palenkodan Robesta Chemkadali Pachakadhali Sundari and Kannan The peel contain about 40% of weight of banana fruit its nutrition analysis is been also done to analyse various contents of significance Further there is chance of occurrence of nutrients in peel since banana fruit is rich in various nutrients And the peel of banana a biomass just discarded into nature can thus be converted to various value added products like drugs soaps animal feed etc It is been observed that these peel is source of various natural antioxidants dietary fibre crude fat and crude protein On analysis Pachakadali fruit has highest moisture content and moisture content of peel is highest for Etha Crude protein content of fruit and peel is highest for Kannan Crude fibre content of fruit is highest for Kannan and crude protein content of peel is highest for Sundari Ether extract in fruit and peel is highest for Kannan Total ash content of fruit is highest for Kannan and ash content of peel is more for Pachakadali Gross energy of fruit is highest in case of Najalipoovan fruit and gross energy of peel is highest for Robesta On comparing these varieties on the basis of test result Kannan is the most superior variety on the basis of nutritional quality Further on analysing test results it has been found that the peel has superior nutrient and moisture content So from the analysis it is revealed that one of the most useful part of a banana is its
