The Virtual Utility Shimon Awerbuch, Alistair Preston, 2012-12-06 In the winter of 1996 after 4 years of planning and research the Symposium on the Virtual Utility was held in Saratoga Springs New York It was sponsored by Niagara Mohawk Power Corporation Co sponsored by CSC Index and the New York State Energy Research and Development Authority and hosted by Rensselaer Polytechnic Institute Troy NY The symposium sought to

identify new areas of inquiry by presenting cutting edge academic and practitioner research intended to further our understanding of the strategic technologically driven issues confronting the electricity production and distribution process. The program sought to offer new insights into rapid changes in the utility industry in part by examining analogues from manufacturing and telecommunications. In addition to identifying new research areas the symposium yielded a number of important findings and conclusions. This volume contains the presented papers of the meeting, the discussant reports and two special papers prepared by the meeting rapporteurs who performed superbly in analyzing, synthesizing, explaining and generally bringing a cohesive perspective to the interesting yet complex set of ideas presented at this unique meeting. We would like to acknowledge the people and organizations that contributed to this effort. We thank Niagara Mohawk Power Corporation and Albert Budney, its President/Chief Operating Officer for sponsoring this project and Andrew Vesey, Vice President, whose vision, support and championing made this project possible.

Theoretical Foundations of Corporate Finance João Amaro de Matos, 2018-06-05 Corporate finance is the area of finance that studies the determinants of firms' values including capital structure, financing and investment decisions. Although there are several excellent texts in corporate finance, this is the first to focus on the theoretical foundations of the subject in a consistent and integrated way at the Ph.D. level. In addition to a textbook for advanced graduate students, it can also serve as a general reference to researchers and sophisticated practitioners. The material presented is carefully selected with an eye to what is essential to understanding the underlying theory, ensuring that this text will remain useful for years to come. The book is divided into three parts. The first section presents the basic principles of valuation based on the absence of arbitrage, including a discussion of the determinants of the optimal capital structure based on the seminal results of Modigliani and Miller. The second section discusses the implications of agency problems and information asymmetries to capital structure, giving particular attention to payout policy and to debt contract design. The concluding portion presents different ways of restructuring capital, including going public, going private, using stock repurchases or leveraged buyouts and mergers and acquisitions. Each chapter includes exercises that vary in difficulty, with suggested solutions provided in an appendix. This book will assuredly be the standard doctoral and professional level explication of corporate finance theory and its appropriate applications.
