gbarkeit von RESTful APIs ist Gegenstand der Betrachtungen Die Entwicklung von E Business Anwendungen wird anhand von zwei Projekten betrachtet die einerseits das RFID gest zte Beh ltermanagement und andererseits die Entwicklung einer App beschreiben *Der Schutz "privater" Informationen bei Cloud Computing* Michael Busching,2019-11-28 Cloud Computing ist zwischenzeitlich sowohl im privaten als auch beruflichen Bereich kaum noch wegzudenken Berufsgeheimnisträger wie Ärzte und Rechtsanwälte stellen derartige Entwicklungen jedoch häufig vor grosse Herausforderungen Für sie gelten besondere Vorschriften die mit dem Gesetz zur Neuregelung des Schutzes von Geheimnissen bei der Mitwirkung Dritter an der Berufsausübung schweigepflichtiger Personen und der Datenschutzgrundverordnung der EU vor noch nicht allzu langer Zeit einige Änderungen erfahren haben Inwieweit bestehen für Ärzte und Rechtsanwälte nach der nunmehr geltenden neuen Rechtslage straf datenschutz und berufsrechtliche Sanktionsrisiken Dieser Frage geht Michael Busching in seiner Untersuchung nach Hierbei werden sowohl die einschlagigen Sanktionsvoraussetzungen sowie damit zusammenhängende Probleme benannt und systematisch abgearbeitet als auch mögliche Massnahmen erörtert durch die eine Sanktionierung unter Umständen vermieden werden kann

Strategies for Improving the Performance and Security** Parashu Ram Pal,Priyanka Ora,2019-11-18 Doctoral Thesis Dissertation from the year 2019 in the subject Computer Science Internet New Technologies language English abstract Continuous advancement in software field and widespread use of software products many innovative applications have emerged cloud computing is one of them In cloud computing users need not to install software they just log in the cloud and pay for their required service As many users are frequently using cloud computing a big question arises here is the security of user s personal data present at cloud Therefore we need to safeguard the data in the midst of untrusted processes On keeping these issues in mind a security model is designed in this thesis The whole model is divided into three sections one is data encryption second is secure data storage and the third one is maintenance of data integrity In first section before uploading the file on cloud file is encrypted by RSA Partial Homomorphic algorithm Two keys public and private are generated after encryption Between these two keys public key is known to all but private key is known to only authorize users In second section the data owner uploads the encrypted file moreover with this one access permission

list containing names of authorized user and their respective permission In this model two access permissions Read Only and Read and Write are defined by the data owner In third section the cloud provider calculates hash value of uploaded file using MD5 hash algorithm This hash value is transferred back to the data owner to use it for verification purpose As Owner performs verification hash value of the desired data present at cloud is again calculated Now this new hash value matches with old hash value which is present at owner end If it matches no modification is performed if hash value does not match then some modifications has been performed on the uploaded data After uploading the file on cloud this file is visible to all users They can easily download the file but cannot decrypt it as all users don t have private key Private key is sent to authenticate users by e mail so that they can get original data Data modification is controlled by the owner as cloud stores data in encrypted form The whole architecture is compared with combination of Triple DES and SHA The results generated by proposed model have shown that it takes less encryption and decryption time as compare to 3DES and SHA combination Therefore the proposed model provides better security and maintains data integrity of the uploaded data on cloud
