Cognitive Models of Speech Processing

Gerry T. M. Altmann,1997 This collection of papers and abstracts stems from the third meeting in the series of Sperlonga workshops on Cognitive Models of Speech Processing It presents current research on the structure and organization of the mental lexicon and on the processes that access that lexicon The volume starts with discussion of issues in acquisition and consideration of questions such as What is the relationship between vocabulary growth and the acquisition of syntax and How does prosodic information concerning the melodies and rhythms of the language influence the processes of lexical and syntactic acquisition From acquisition the papers move on to consider the manner in which contemporary models of spoken word recognition and production can map onto neural models of the recognition and production processes The issue of exactly what is recognised and when is dealt with next the empirical findings suggest that the function of

something to which a word refers is accessed with a different time course to the form of that something This has considerable implications for the nature and content of lexical representations Equally important are the findings from the studies of disordered lexical processing and two papers in this volume address the implications of these disorders for models of lexical representation and process borrowing from both empirical data and computational modelling The final paper explores whether neural networks can successfully model certain lexical phenomena that have elsewhere been assumed to require rule based processes [Stevens' Handbook of Experimental Psychology and Cognitive Neuroscience, Developmental and Social Psychology](#), 2018-02-01 IV Developmental self evaluation moral development emotion cognition interactions person perception memory implicit social cognition motivation group processes development of scientific thinking language acquisition development of mathematical reasoning emotion regulation emotional development development of theory of mind category and conceptual development attitudes executive function [Entwicklungspsychologie im Kindes- und Jugendalter](#) Robert Siegler,Jenny R.
