Lau, Yunhe Pan, 2009-05-12 A Computational Approach to Digital Chinese Painting and Calligraphy is a technical book on computer science and its applications in the arts It focuses on Oriental digital arts in particular Chinese arts and painting offering a multi disciplinary treatment from the angles of computer graphics interactive techniques human computer interaction and artificial intelligence The book also discusses the unique difficulties and challenges of using the computer to produce Oriental arts including research results by the authors and their lessons and engineering experiences behind these efforts Songhua Xu is a computer scientist of Zhejiang University and Yale University as well as an honorary researcher of the University of Hong Kong Francis C M Lau is Professor at the University of Hong Kong where he leads the Systems Research Group in the Department of Computer Science Yunhe Pan is Professor of Computer Science at Zhejiang University as well as Deputy President of Chinese Academy of Engineering     **Digital Image Processing Techniques** Michael P. Ekstrom, 2012-12-02 Digital Image Processing Techniques is a state of the art review of digital image processing techniques with emphasis on the processing approaches and their associated algorithms A canonical set of image processing problems that represent the class of functions typically required in most image processing applications is presented Each chapter broadly addresses the problem being considered the best techniques for this particular problem and how they work their strengths and limitations and how the techniques are actually implemented as well as their computational aspects Comprised of eight chapters this volume begins with a discussion on processing techniques associated with the following tasks image enhancement restoration detection and estimation reconstruction and analysis along with image data compression and image spectral estimation The second section describes hardware and software systems for digital image processing Aspects of commercially available systems that combine both processing and display functions are considered as are future prospects for their technological and architectural evolution The specifics of system design trade offs are explicitly presented in detail This book will be of interest to students practitioners and researchers in various disciplines including digital signal processing computer science statistical communications theory control systems and applied physics     *Ein System zur automatischen Auswertung von Ultraschall-Messdaten* Malte Ahrholdt, 2005     **Image Processing** Artyom M. Grigoryan, Merughan M. Grigoryan, 2018-09-03 Focusing on mathematical methods in computer tomography Image Processing Tensor Transform and Discrete Tomography with MATLAB introduces novel approaches to help in solving the problem of image reconstruction on the Cartesian lattice Specifically it discusses methods of image

processing along parallel rays to more quickly and accurately reconstruct images from a finite number of projections thereby avoiding overirradiation of the body during a computed tomography CT scan The book presents several new ideas concepts and methods many of which have not been published elsewhere New concepts include methods of transferring the geometry of rays from the plane to the Cartesian lattice the point map of projections the particle and its field function and the statistical model of averaging The authors supply numerous examples MATLAB based programs end of chapter problems and experimental results of implementation The main approach for image reconstruction proposed by the authors differs from existing methods of back projection iterative reconstruction and Fourier and Radon filtering In this book the authors explain how to process each projection by a system of linear equations or linear convolutions to calculate the corresponding part of the 2 D tensor or paired transform of the discrete image They then describe how to calculate the inverse transform to obtain the reconstruction The proposed models for image reconstruction from projections are simple and result in more accurate reconstructions Introducing a new theory and methods of image reconstruction this book provides a solid grounding for those interested in further research and in obtaining new results It encourages readers to develop effective applications of these methods in CT *Konstruktion und Implementierung eines neuen Verfahrens zur Kompression von Bilddaten* Jörg

**Learning and Image Interpretation** Terry Caelli,Walter F. Bischof,2013-11-21 In this groundbreaking new volume computer researchers discuss the development of technologies and specific systems that can interpret data with respect to domain knowledge Although the chapters each illuminate different aspects of image interpretation all utilize a common approach one that asserts such interpretation must involve perceptual learning in terms of automated knowledge acquisition and application as well as feedback and consistency checks between encoding feature extraction and the known knowledge structures in a given application domain The text is profusely illustrated with numerous figures and tables to reinforce the concepts discussed **Advances in Computer Vision and Information Technology** ,2013-12-30 The latest trends in
