Materials for Environmental Analysis E.A. Maier, Ph. Quevauviller, 1999-12-17 The participation in interlaboratory studies and the use of Certified Reference Materials CRMs are widely recognised tools for the verification of the accuracy of analytical measurements and they form an integral part of quality control systems used by many laboratories e.g. in accreditation schemes As a response to the need to improve the quality of environmental analysis the European Commission has been active in the past fifteen years through BCR activity now renamed Standards Measurements and Testing Programme in the organisation of series of interlaboratory studies involving expert laboratories in various analytical fields inorganic trace organic and speciation analysis applied to a wide variety of environmental matrices The BCR and its successor have the task of helping European laboratories to improve the quality of measurements in analytical sectors which are vital for the European Union biomedical agriculture food environment and industry these are most often carried out in support of EC regulations industrial needs trade monitoring activities including environment agriculture health and safety and more generally when technical difficulties hamper a good comparability of data among EC laboratories The collaborative projects carried out so far have placed the BCR in the position of second world CRM producer after NIST in the USA Interlaboratory Studies and Certification of Reference Materials for Environmental Analysis gives an account of the importance of reference materials for the quality control of environmental analysis and describes in detail the procedures followed by BCR to prepare environmental reference materials including aspects related to sampling stabilization homogenisation homogeneity and stability testing establishment of reference or certified values and use of reference materials Examples of environmental CRMs produced by BCR within the last 15 years are given which represent more than 70 CRMs covering different types of materials plants biological materials waters sediments soils and sludges coals ash and dust materials certified for a range of chemical parameters major and trace elements chemical species PAHs PCBs pesticides and dioxins The final section of the book describes how to organise improvement schemes for the evaluation method and or laboratory performance Examples of interlaboratory studies learning scheme proficiency testing and intercomparison in support to prenormative research are also given Manual of Environmental Microbiology Christon J. Hurst, Ronald L. Crawford, 2002 The new second edition of this essential manual summarizes the information and knowledge of environmental microbiology in a single source It details the natural fate of microorganisms in the environment as well as the intentional attempts to eliminate from the environment microorganisms that are pathogenic to humans or to plants and animals The basic principles of environmental microbiology and general analytical methodologies common across the range of the environments covered are presented first The core sections are structured with regard to the type of environmental medium being discussed This landmark effort defines the study of environmental microbiology as we know it today and serve as an essential contribution to the literature **Wastewater Microbiology** Gabriel Bitton, 2011-06-09 Wastewater Microbiology focuses on microbial contaminants found in wastewater methods of detection for these contaminants and methods of

cleansing water of microbial contamination This classic reference has now been updated to focus more exclusively on issues particular to wastewater with new information on fecal contamination and new molecular methods The book features new methods to determine cell viability activity in environmental samples a new section on bacterial spores as indicators new information covering disinfection byproducts UV disinfection and photoreactivation and much more A PowerPoint of figures from the book is available at ftp://ftp.wiley.com/public/sci_tech_med/wastewater_microbiology
