Study Glossary Index **Mine Closure** N.C. Saxena,2008-09-01 Mining is basically an intermediate use of land and it causes various impacts on all the components of environment In most situations the impacts on land are severe and may cause the land to become useless for any economic use after mining Since the mining companies take land areas which have been in various uses before the onset of mining activities it should have been obligatory for the companies to develop the land areas for uses most suitable for the economic activities after mining Though this was known right from the inception of the mining activities the efforts towards developing the land after mining were negligible This has resulted in devastation of mined out land in many locations in the country Keeping in view the importance and the necessity of development of land areas legislation have been formulated for mine closure The legislation are recent not many mines have been closed in accordance with the provisions therein A lot of work is still required to be done to make mine closure really effective All over the world the importance of the mine closure is being realized due mainly to the following reasons Closure planning at all the stages in a mine's life is important to the economics of a mine and such a planning results in a large cost savings In this book the following aspects of mine closure planning and implementation in the opencast and underground mines with special reference to the mining situations in the India have been outlined 1 Impacts of mining on environmental components and their roles in mine closure planning 2 Legal social and economic necessity of mine closure 3 Land use planning as a tool for mine closure planning and implementation 4 How to incorporate mine closure in mine planning 5 Mine closure planning in underground and opencast mines 6 Implications of mine fires in mine closure 7 Mine closure planning for small mines 8 Taking care of the abandoned mines i.e closure of abandoned mines 9 Economics of mine closure 10 Management of ecology during mine closure The book is expected to be useful to the practical mining engineers and environmentalists in mine planning and design It should also be useful to the researchers and students of mining and environment

Application of Adsorbents for Water Pollution Control Amit Bhatnagar,2012-11-11 Among various water and wastewater treatment technologies the adsorption process is considered better because of lower cost simple design and easy operation Activated carbon a universal adsorbent is generally used for the removal of diverse types of pollutants from water and wastewater Research is now being directed towards the modification of carbon surfaces to enhance its adsorption potential towards specific pollutants However widespread use of commercial activated carbon is sometimes restricted especially in developing or poor countries due to its higher costs Attempts are therefore being made to develop inexpensive adsorbents utilizing abundant natural materials agricultural and industrial waste materials Use of waste materials as low cost adsorbents is attractive due to their contribution in the reduction of costs for waste disposal therefore contributing to environmental protection This e book explores knowledge on recent developments in adsorbents synthesis and their use in water pollution control This handy reference work is intended for researchers and scientists actively engaged in the study of adsorption and the development and application of efficient adsorption technology for water treatment This e book covers a wide range of topics including modeling aspects of

adsorption process and the applications of conventional and non conventional adsorbents in water remediation emphasizing sorption mechanisms of different pollutants on the adsorbents Energy and Environment Bilash Kanti Bala,1998 Studies the dynamic behavior of energy and environment systems to aid in energy and environmental policy planning for sustainable development The author considers modelling of energy and environment with micro and macro level applications from developing countries using both simulation and optimization techniques He also presents a plan for integrated rural energy systems to promote sustainable development Annotation copyrighted by Book News Inc Portland OR
