**Biotechnology**, 2001      **Environmental Biotechnology** Gareth M. Evans, Judith C. Furlong, 2003-06-13 The application of biologically engineered solutions to environmental problems has become far more readily acceptable and widely understood However there remains some uncertainty amongst practitioners regarding how and where the microscopic functional level fits into the macroscopic practical applications It is precisely this gap which the book sets out to fill Dividing the topic into logical strands covering pollution waste and manufacturing the book examines the potential for biotechnological interventions and current industrial practice with the underpinning microbial techniques and methods described in context against this background Each chapter is supported by located case studies from a range of industries and countries to provide readers with an overview of the range of applications for biotechnology Essential reading for undergraduates and Masters student taking modules in Biotechnology or Pollution Control as part of Environmental Science Environmental Management or Environmental Biology programmes It is also suitable for professionals involved with water waste management and pollution control      Environmental Biotechnology Daniel A. Vallero, 2015-09-11 Environmental Biotechnology A Biosystems Approach Second Edition presents valuable information on how biotechnology has acted as a vital buffer among people pollution and the environment It answers the most important questions on the topic including how and why a knowledge and understanding of the physical chemical and biological principles of the environment must be achieved in order to develop biotechnology applications Most texts address either the applications or the implications of biotechnology This book addresses both The applications include biological treatment and other environmental engineering processes The risks posed by biotechnologies are evaluated from both evidence based and precautionary perspectives Using a systems biology approach the book provides a context for researchers and practitioners in environmental science that complements guidebooks on the necessary specifications and criteria for a wide range of environmental designs and applications Users will find crucial information on the topics scientific researchers must evaluate in order to develop further technologies Provides a systems approach to biotechnologies which includes the physical biological and chemical processes in context Presents relevant case studies on cutting edge technologies such as nanobiotechnologies and green engineering Addresses both the applications and implications of biotechnologies by following the lifecycle of a variety of established and developing biotechnologies Includes crucial information on the topics scientific researchers must evaluate in order to develop further technologies      Introduction to Environmental Biotechnology Ketan Dattani, 2024-06-12 Discover how science can save the

**Environmental Biotechnology for Waste Treatment** Gary S. Saylor, Robert Fox, James Blackburn, 2013-11-11 The use of biotechnical processes in control of environmental pollution and in hazardous waste treatment is viewed as an advantageous alternative or adduct to physical chemical treatment technologies Yet the development and implementation of both conventional and advanced biotechnologies in predictable and efficacious field applications suffer from numerous technical regulatory and societal uncertainties With the application of modern molecular biology and genetic engineering there is clear potential for biotechnical developments that will lead to breakthroughs in controlled and optimized hazardous waste treatment for in situ and unit process use There is however great concern that the development of these technologies may be needlessly hindered in their applications and that the fundamental research base may not be able to sustain continued technology development Some of these issues have been discussed in a fragmented fashion within the research and development community A basic research agenda has been established to promote a sustainable cross disciplinary technology base This agenda includes developing new and improved strains for biodegradation improving bioanalytical methods to measure strain and biodegradation performance and providing an integrated environmental and reactor systems analysis approach for process control and optimization
