Jacobs, 2018-08-17 How investment strategies designed to reduce risk can increase risk for everyone and can crash markets and economies Financial crises are often blamed on unforeseeable events the unforgiving nature of capital markets or just plain bad luck Too Smart for Our Own Good argues that these crises are caused by certain alluring investment strategies that promise both high returns and safety of capital In other words the severe and widespread crises we have suffered in recent decades were not perfect storms Instead they were made by us By understanding how and why this is so we may be able to avoid or ameliorate future crises and maybe even anticipate them One of today's leading financial thinkers Bruce I Jacobs examines recent financial crises including the 1987 stock market crash the 1998 collapse of the hedge fund Long Term Capital Management the 2007 2008 credit crisis and the European debt crisis and reveals the common threads that explain these market disruptions In each case investors in search of safety were drawn to novel strategies that were intended to reduce risk but actually magnified it and blew up markets Too Smart for Our Own Good takes a behind the curtain look at The inseparable nature of investment risk and reward and the often counterproductive effects of some popular approaches for reducing risk A trading strategy known as portfolio insurance and the key role it played in the 1987 stock market crash How option related trading disrupted markets in the decade following the 1987 crash Why the demise of Long Term Capital Management in 1998 wreaked havoc on US stock and bond markets How mortgage backed financial products by shifting risk from one party to another created the credit crisis of 2007 2008 and contributed to the subsequent European debt crisis This broad detailed investigation of financial crises is the most penetrating and objective look at the subject to date In addition Jacobs an industry insider offers invaluable insights into the nature of investment risk and reward and how to manage risk Risk is unavoidable especially in investing and financial markets connect us all Until we accept these facts and manage risk in responsible ways major crises will always be just around the bend Too Smart for Our Own Good is a big step toward smarter investing and a better financial future for everyone **Quantitative Portfolio Optimization** Miquel Noguer Alonso, Julian Antolin Camarena, Alberto Bueno Guerrero, 2025-01-29 Expert guidance on implementing quantitative portfolio optimization techniques In Quantitative Portfolio Optimization Theory and Practice renowned financial practitioner Miquel Noguer alongside physicists Alberto Bueno Guerrero and Julian Antolin Camarena who possess excellent knowledge in finance delve into advanced mathematical techniques for portfolio optimization The book covers a range of topics including mean variance optimization the Black Litterman Model risk parity and hierarchical risk parity factor investing methods based on moments and robust optimization as well as machine learning and reinforcement technique These techniques enable readers to develop a systematic objective and repeatable approach to investment decision making particularly in complex financial markets Readers will gain insights into the associated mathematical models statistical analyses and computational algorithms for each method allowing them to put these

financial historian comes the gripping character driven story of venture capital and the world it made. Innovations rarely come from experts. Jeff Bezos was not a bookseller. Elon Musk was not in the auto industry. When it comes to innovation, a legendary venture capitalist told Sebastian Mallaby, the future cannot be predicted; it can only be discovered. Most attempts at discovery fail, but a few succeed at such a scale that they more than make up for everything else. That extreme ratio of success and failure is the power law that drives venture capital. Silicon Valley, the tech sector, and by extension the world. Drawing on unprecedented access to the most celebrated venture capitalists of all time, award-winning financial historian Sebastian Mallaby tells the story of this strange tribe of financiers who have funded the world's most successful companies, from Google to SpaceX to Alibaba. With a riveting blend of storytelling and analysis, *The Power Law* makes sense of the seeming randomness of success in venture capital, an industry that relies for good and ill on gut instinct and personality rather than spreadsheets and data. We learn the unvarnished truth about some of the most iconic triumphs and infamous disasters in the history of tech, from the comedy of errors that was the birth of Apple to the venture funding that fostered hubris at WeWork and Uber to the industry's notorious lack of women and ethnic minorities. Now the power law echoes around the world; it has transformed China's digital economy beyond recognition, and London is one of the top cities for venture capital investment. By taking us so deeply into the VCs' game, *The Power Law* helps us think about our own future through their eyes.
