Nonlinear Analysis and Computational Techniques Hemant Kumar Nashine, Ranis Ibragimov, Hemanta Kalita, 2025-08-04  
The book focuses on the theory of fixed points which is a foundation for many branches of pure and applied mathematics. Fixed point theorems have been studied in various function spaces. The book contains modern results on these theorems investigated in generalized spaces such as  $S$  metric spaces, convex metric spaces and bipolar metric spaces with applications in medical imaging. The nonlinear analysis presented in the book is valuable for modeling and solving real world problems. It includes work on specific nonlinear operators and nonlinear fractional integral equations in Banach spaces. Relevant studies are also included on statistical convergence, inventory model, modeling computational techniques for Sentiment Analysis on Twitter Data and Blood Management applications. The book is intended for young researchers interested in nonlinear analysis, fixed point theory and computational techniques.

$q$ -Fractional Calculus and Equations Mahmoud H. Annaby, Zeinab S. Mansour, 2012-08-27  
This nine chapter monograph introduces a rigorous investigation of  $q$  difference operators in standard and fractional settings. It starts with elementary calculus of  $q$  differences and integration of Jackson's type before turning to  $q$  difference equations. The existence and uniqueness theorems are derived using successive approximations leading to systems of equations with retarded arguments. Regular  $q$  Sturm Liouville theory is also introduced. Green's function is constructed and the eigenfunction expansion theorem is given. The monograph also discusses some integral equations of Volterra and Abel type as introductory material for the study of fractional  $q$  calculi. Hence fractional  $q$  calculi of the types Riemann Liouville, Grunwald Letnikov, Caputo, Erdelyi, Kober and Weyl are defined analytically. Fractional  $q$  Leibniz rules with applications in  $q$  series are also obtained with rigorous proofs of the formal results of Al-Salam-Verma which remained unproved for decades. In working towards the investigation of  $q$  fractional difference equations, families of  $q$  Mittag-Leffler functions are defined and their properties are investigated, especially the  $q$  Mellin-Barnes integral and Hankel contour integral representation of the  $q$  Mittag-Leffler functions. Under consideration, the distribution, asymptotic and reality of their zeros, establishing  $q$  counterparts of Wiman's results. Fractional  $q$  difference equations are studied, existence and uniqueness theorems are given and classes of Cauchy type problems are completely solved in terms of families of  $q$  Mittag-Leffler functions. Among many  $q$  analogs of classical results and concepts,  $q$ -Laplace,  $q$ -Mellin and  $q^2$ -Fourier transforms are studied and their applications are investigated.
