Building a Sustainable Home Melissa Rappaport Schiffman, 2018-08-07 The green building movement has produced hundreds of how to books and websites that are filled with tips about green building and what homeowners should do to go green While helpful and informative when it comes to making actual purchasing and installation decisions these books do not make it any easier for a homeowner to prioritize against a budget Here Schiffman shares her knowledge and experience for others to use in their journey toward a greener way of living Whether the reader is building a new home or doing a minor remodel a homeowner needs a framework by which to guide their decisions These decisions are based on values and the author posits that there are really only three reasons to go green For Our Health By building more sustainably we reduce our exposure to harmful chemicals and toxins For Our Wealth By building a more durable home and being more efficient with resources like water and electricity we reduce our monthly utility bills and ongoing maintenance expenses For Our Soul Collectively doing the right thing for our planet does make a difference and that is soul nourishing Learn the logistics of choosing windows insulation appliances and lighting Find out about FSC certified wood and about using reclaimed materials Here is everything you need to make your home sustainable

[Polymeric Systems as Antimicrobial or Antifouling Agents](#) Antonella Piozzi, Iolanda Francolini, 2020-05-22 The rapid increase in the emergence of antibiotic resistant bacterial strains combined with a dwindling rate of discovery of novel antibiotic molecules has created an alarming issue worldwide Although the occurrence of resistance in microbes is a natural process the overuse of antibiotics is known to increase the rate of resistance evolution

Under antibiotic treatment susceptible bacteria inevitably die while resistant microorganisms proliferate under reduced competition. Therefore the out of control use of antibiotics eliminates drug susceptible species that would naturally limit the expansion of resistant species. In addition the ability of many microbial species to grow as a biofilm has further complicated the treatment of infections with conventional antibiotics. A number of corrective measures are currently being explored to reverse or slow antibiotic resistance evolution. Among which one of the most promising solutions is the development of polymer based antimicrobial compounds. In this Special Issue different polymer systems able to prevent or treat biofilm formation including cationic polymers, antibacterial peptide mimetic polymers, polymers or composites able to load and release bioactive molecules and antifouling polymers able to repel microbes by physical or chemical mechanisms are reported. Their applications in the design and fabrication of medical devices in food packaging and as drug carriers is investigated.

Occupational Hazards Of Pesticide Exposure Donald J. Ecobichon, 2020-08-12. With three million intoxications a year, global concern about occupational exposure to pesticides makes it crucial that occupational health professionals be able to monitor pesticide exposure.
