Salinity and Drainage in San Joaquin Valley, California Andrew C. Chang, Deborah Brawer Silva, 2013-11-19 This book documents the history of irrigated agriculture and drainage in the San Joaquin Valley and describes the hydrology and biogeochemical processes of salts and selenium remediation technologies for salts and trace elements and policy and management options The contents are comprised of fourteen chapter length independent treatises each depicting with fresh perspective a distinctive salinity drainage topic The opening chapters detail the evolution of irrigated agriculture and depict the geochemical and hydrological processes that define the San Joaquin Valley including the physics chemistry and biology attributes that impact water management policies and strategies Next the contributors address the biogeochemistry of selenium the role of plants in absorbing it from soils and the processes involved in retaining and concentrating dissolved salts in drainage water Further chapters describe on farm and plot level irrigation provisions to reduce agricultural drainage outputs and examine their effects on plant performance This volume offers realistic policy analysis of water management options for irrigated agriculture in the Valley and assesses their respective outcomes if implemented Also included is an international perspective on the sustainability of irrigated agriculture there Wetland Carbon and Environmental

Management Ken W. Krauss, Zhiliang Zhu, Camille L. Stagg, 2021-10-13 Explores how the management of wetlands can influence carbon storage and fluxes Wetlands are vital natural assets including their ability to take up atmospheric carbon and restrict subsequent carbon loss to facilitate long term storage They can be deliberately managed to provide a natural solution to mitigate climate change as well as to help offset direct losses of wetlands from various land use changes and natural drivers Wetland Carbon and Environmental Management presents a collection of wetland research studies from around the world to demonstrate how environmental management can improve carbon sequestration while enhancing wetland health and function Volume highlights include Overview of carbon storage in the landscape Introduction to wetland management practices Comparisons of natural managed and converted wetlands Impact of wetland management on carbon storage or loss Techniques for scientific assessment of wetland carbon processes Case studies covering tropical coastal inland and northern wetlands Primer for carbon offset trading programs and how wetlands might contribute The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals **Irrigation Sustainability with**

Saline and Alkali Waters Paramjit S. Minhas, Manzoor Qadir, 2024-09-26 This book provides a practical guidance and a set of principles for improving management of saline and alkali waters and thus would be useful for different stakeholders including agricultural students researchers environmentalists and policy makers The worldwide aggregated area with occurrence of saline and brackish groundwater is about 24 million square kilometers causing annual food losses to the extent

of food requirements of 170 million people For fostering the safe and reliable use of these waters researchers have innovated management techniques helping sustainable irrigation with waters otherwise rated earlier as unfit Vast pool of information has been put together in this book covering groundwater irrigation scenario and need for non conventional waters extent genesis and global distribution of saline groundwater impacts of saline and alkali irrigation waters on soils and crops management approaches for sustaining irrigation with typical saline and alkali ground waters for agricultural and horticulture crops steady and non steady state models for salt and water dynamics vis a vis crop responses alternate uses of highly saline waters water quality guidelines for irrigation under different soil and agro climatic conditions and ultimately some researchable and policy issues for promoting irrigation with these waters Water quality in agriculture: Risks and risk mitigation Food and Agriculture Organization of the United Nations,2023-09-08 This publication Water Quality in Agriculture Risks and Risk Mitigation emphasizes technical solutions and good agricultural practices including risk mitigation measures suitable for the contexts of differently resourced institutions working in rural as well as urban and peri urban settings in low and middle income countries With a focus on sustainability of the overall land use system the guidelines also cover possible downstream impacts of farm level decisions As each country has a range of site specific conditions related to climate soil and water quality crop type and variety as well as management options subnational adjustments to the presented guidelines are recommended Water Quality in Agriculture Risks and Risk Mitigation is intended for use by national and subnational governmental authorities farm and project managers extension officers consultants and engineers to evaluate water quality data and identify potential problems and solutions related to water quality The presented guidelines will also be of value to the scientific research community and university students The chapters in this publication address the following topics Chapter 2 describes the linkages between water quality and achieving the United Nations Sustainable Development Goals and the need for water quality monitoring Chapter 3 provides an overview of existing water quality guidelines and standards across the world including those reliant on technological advances and stringent water quality monitoring and others based on health based targets as recommended by WHO Chapter 4 is dedicated to pathogenic threats in particular from domestic wastewater while the elaborated Chapter 5 targets chemical risks with significant emphasis on salinity The interlinkages between water quality and aquaculture and water quality and livestock production are described in Chapters 6 and 7 respectively The importance of water quality for a healthy environment and ecology is explored in Chapter 8 and further extended to watersheds and river basin scales in Chapter 9 looking at the approaches used to analyze monitor and manage water quality and possible downstream impacts in their larger geographical context Finally Chapter 10 provides an overview of the most common and or significant barriers and drivers of relevance for the adoption of water reuse guidelines and best practices within a given regulatory and institutional context with special attention to low and middle income countries **Thematic 1: Farmers' guidelines on soil and water management in salt-affected areas** Food and

Agriculture Organization of the United Nations,2023-11-17 The threats posed by salt affected soils to global food security are dire According to the recent Global salt affected soils map over 424 million hectares of topsoil 0 30 cm and 833 million hectares of subsoil 30 100 cm are currently salt affected This practical guide to soil and water management in salt affected areas provides vital information to farmers dealing with salinity and sodicity issues on their farms and assists them in following suggested practices to mitigate or and to adapt to these unfavourable conditions without compromising further losses in yields *Guidelines for brackish water use for agricultural production in the Near East and North Africa region*

Food and Agriculture Organization of the United Nations,Arab Water Council,2023-01-26 Water scarcity is one of the major challenges in the 19 countries of the Near East and North Africa NENA region The lack of water is affecting important irrigated areas limiting the increase of food production needed to address the growing demand due to population growth In most countries of the NENA region the need to use non conventional water resources including brackish water is well recognized Brackish water is loosely defined as water that is more saline than freshwater but less saline than seawater It covers a large range of salinity levels from 500 to 30 000 mg l of total dissolved solids TDS Despite the presence of large amounts of brackish water and its potential for use in growing a number of crops it is only used in limited amounts for irrigation The successful use of brackish water for irrigation requires a basic understanding of scientific principles affecting the interactions among the climate the applied water the soil the crop and the environment Equally important is the application of suitable technology and management practices that will facilitate the optional use of this poor quality water The successful use of brackish water requires a higher level of management and likely the adoption of new irrigation management practices Because climate water quality soil type and crop tolerance to salinity vary from location to location guidelines with some degree of site specific flexibility must be developed **Developing Sustainable Agriculture in**

Pakistan Iqrar Ahmad Khan,Muhammad Sarwar Khan,2018-04-17 Agriculture plays a pivotal role in the economy and development of Pakistan providing food to consumers raw materials to industries and a market for industrial goods Unfortunately agricultural production is stagnant due to several barriers including a fixed cropping pattern reliance on a few major crops a narrow genetic pool poor seed quality and a changing climate In addition the high cost of production weak phytosanitary compliance mechanisms and a lack of cold chain facilities makes Pakistan agriculturally uncompetitive in export markets Despite all these issues agriculture is the primary industry in Pakistan and small farmers continue to dominate the business Small farmers grow crops for subsistence under a fixed cropping pattern and a holistic approach is required to develop agriculture to improve the livelihoods of the rural populace This book presents an exhaustive look at agriculture in Pakistan Chapters provide critical analyses of present trends inadequacies in agriculture strategic planning improvement programs and policies while keeping in view the natural resources plant and animal related agricultural production technologies input supplies population planning migration and poverty and balanced policies on finance credit
