

The Descriptive Phenomenological Psychological Method

Amedeo Giorgi, Barbro Giorgi¹ and James Morley

Phenomenology is a philosophy that began in 1900 with the publication of *Logical Investigations* by Edmund Husserl (1970). In that work Husserl introduced a novel way of examining and studying the phenomenon of consciousness. It should be remembered that psychology was founded in 1879 as the science of consciousness by Wilhelm Wundt in Leipzig. Wundt pursued the study of consciousness primarily by the use of empirical methods. Later, when the behaviorist movement (Watson, 1913), dominated the field, positivistic approaches became dominant. These approaches made sense because both empiricism and positivism, historically, were philosophies associated with scientific investigations: empiricism since the seventeenth century and positivism since the nineteenth century. Since phenomenology was the most recent philosophy to support scientific endeavors, and its criteria and emphases differ from those of empiricism or positivism, it has not been easily assimilated by psychology. It has taken time for psychologists to respond to what it has to offer. The exception that proves the rule is the impact that it had on the Würzburg experiments on thinking (Humphrey, 1963) that took place in the first decade of the twentieth century.

Like most intellectual movements phenomenology is not all of one piece. While Husserl laid out the main dimensions of the phenomenological

movement, almost every follower of his deviated from him in some manner or other. Since there are a variety of phenomenological interpretations one should not be surprised that several interpretations of the phenomenological method have taken place within psychology. In this chapter we will detail one way in which psychologists have adapted an articulation of the philosophical phenomenological method for its scientific purposes and only briefly describe some other interpretations without any effort at evaluation.

In a previous version of this chapter we offered a mostly historical and theoretical explication of the phenomenological movement in psychology. We covered the various interpretations of the meaning of phenomenology when applied to psychology. While including a synopsis of this historical review ahead, this new chapter is intended as an example that demonstrates how the method can be concretely applied to descriptive data, but we urge that it not be construed as a completed research project. Examples of complete contemporary applications will be referenced at the very conclusion. But before doing so, it is important to spell out the intricate but different and difficult interdisciplinary relationship between the philosophical and psychological levels of analysis.

Throughout most of its history, especially in the West, science has been based on some

Descriptive Phenomenological Psychological Method Rodger Broome, 2011 This paper is the methodology section of my doctoral dissertation that outlines the Descriptive Phenomenological Psychological Method of research as it has been taught to me by Amedeo P Giorgi Giorgi 2009 based his method on Husserl's descriptive phenomenological philosophy as an alternative epistemology for human science research This method section references Giorgi's work and the phenomenological tradition of Husserl Merleau Ponty and others Each step of Giorgi's 2009 modified Husserlian method is described and explained in the context of doing psychological research on the lived experience of the participants in my dissertation research The steps are 1 assume the phenomenological attitude 2 read entire written account for a sense of the whole 3 delineate meaning units 4 transform the meaning units into psychologically sensitive statements of their lived meanings and 5 synthesize a general psychological structure of the experience base on the constituents of the experience It is the first person psychological perspective that is sought so that an empathetic position can be adopted by the end user of the research

The Descriptive Phenomenological Method in Psychology Amedeo Giorgi, 2009 This comprehensive work from one of the leading thinkers in humanistic psychology provides a thorough discussion of the phenomenological foundations for qualitative research in psychology Amedeo Giorgi's examination operates out of the intersection of phenomenological philosophy science and psychology such a multidisciplinary approach allows him to challenge several long standing assumptions about the practice of psychology Giorgi asserts that empiricism is not the best philosophy for grounding the science of psychology rather the broader phenomenological theory of science permits more adequate psychological development Giorgi draws from Husserl's philosophical principles the reasons for conducting research in psychology and then offers practical steps for applying a phenomenological method and real examples of applications of the method In fact Giorgi proposes a method that is theoretically grounded in phenomenological philosophy and yet treats empirically derived data This is a rigorous but open qualitative research method that is tolerant of parascientific givens as well as one that is supportive of rational criteria The analyses and methods presented in *Phenomenological Method in Psychology* will be attractive to psychologists phenomenologists and researchers involved in qualitative research throughout social and human science disciplines

Reflections on Certain Qualitative and Phenomenological Psychological Methods Amedeo Giorgi, 2020-06-15 One could describe the status of psychological research today as one in which qualitative methods based upon diverse philosophies have been developing and advancing at a fast pace It is a time therefore when reflections on this state of affairs are appropriate The five essays in this book are all concerned with qualitative methods and their philosophical backgrounds Briefly the first essay contrasts the relative merits of the three most used philosophical bases for qualitative

methods empirical philosophy hermeneutics and Husserlian descriptive phenomenology The second essay tries to resolve the tensions between descriptive and interpretive methods Both are of service to science but they relate to different conditions The third essay discusses certain pitfalls that should be avoided when conducting psychological research on oneself The fourth essay describes the extension of certain guidelines when using the descriptive phenomenological method The fifth essay challenges the assumption of naturalism for psychology and argues for the development of a non naturalistic method for psychology

Transcendental Phenomenological Psychology Jon L. James, 2011-06 From the Preface to the Revised Edition Since its publication in 2007 Transcendental Phenomenological Psychology has been sold on every continent except Antarctica and is in the collections of research libraries in North America Europe and Asia Even so its presentation to the academic community rightly provoked many comments corrections suggestions and criticisms Such input while mostly welcome provided the impetus to publish a revised edition A phenomenological explanation of human consciousness has long been sought in regions of psychology since the discipline was first carved out of philosophical concepts and theories about the human condition In its earliest years Western psychology was faced with two possible directions for this explanation an empirical naturalistic approach along with physics and biology or a non empirical eidetic approach along with logic and mathematics Edmund Husserl took up the latter His phenomenological tradition of inquiry successfully spanned nearly forty years until suddenly stopped and largely suppressed during the Second World War This book recovers Husserl s revolutionary approach toward the human sciences just as it was developed and just as it is presented for further study Here the author systematically gathers what Husserl calls the leading clues in the phenomenological method proper for a psychology of affective inner experience and then for the first time applies Husserl s own methodology for introducing a phenomenological psychology in the transcendental register of human consciousness Unlike contemporary phenomenological psychology in the existential register transcendental phenomenological psychology is presented as an eidetic non empirical act psychology in Husserl s mature genetic phenomenology This novel approach takes in the full range of solipsistic and transcendental subjectivity in Husserl s theories of human consciousness and follows Husserl s lead in presenting phenomenological psychology as an applied geometry of intentional experience within a step wise theory of inquiry This book is unique in human science today not only in its presentation of the development and applications of Husserl s key concepts for the discipline of psychology but also for introducing a psychology that could be intuitively grasped as self evidently valid wherever one s interest might lie
