Designing Instructional Systems A J Romiszowski, 2016-01-08 This book deals with large scale or macro level instructional design which is referred to by other authors variously as curriculum development course design training system design or instructional systems design The emphasis throughout the book is on the application of a systems approach which implies both a way of thinking about the problem and a methodology for seeking and developing solutions Thus the approach of the book is problem oriented The successful problem solver requires more than a technique or procedure He requires experience of similar problems some general principles that he can apply to the class of problems and a great deal of creativity to develop an optimal method of solving each problem This book brings together the theories and practical experience that have been built up by instructional technologists over the last two decades the techniques that are currently

most used for the analysis of problems in education and for their solution and a range of new ideas specially developed by the author to encourage the creative element so often missing from educational materials This book is intended for anyone involved in instructional design It is designed on a grid structure to facilitate the reader's choice of chapters Those who wish to gain a general overview may concentrate on the chapters at the theory base and analysis levels Those more practically concerned with course design will find much of use in the synthesis and evaluation levels Those who wish simply to discover what's new in this book and its treatment of instructional design will find what they are seeking principally in the analysis and evaluation levels

Artificial Neural Networks in Hydrology R.S. Govindaraju, A.R. Rao, 2013-03-09 R S GOVINDARAJU and ARAMACHANDRA RAO School of Civil Engineering Purdue University West Lafayette IN USA Background and Motivation The basic notion of artificial neural networks ANNs as we understand them today was perhaps first formalized by McCulloch and Pitts 1943 in their model of an artificial neuron Research in this field remained somewhat dormant in the early years perhaps because of the limited capabilities of this method and because there was no clear indication of its potential uses However interest in this area picked up momentum in a dramatic fashion with the works of Hopfield 1982 and Rumelhart et al 1986 Not only did these studies place artificial neural networks on a firmer mathematical footing but also opened the door to a host of potential applications for this computational tool Consequently neural network computing has progressed rapidly along all fronts theoretical development of different learning algorithms computing capabilities and applications to diverse

areas from neurophysiology to the stock market Initial studies on artificial neural networks were prompted by a desire to have computers mimic human learning As a result the jargon associated with the technical literature on this subject is replete with expressions such as excitation and inhibition of neurons strength of synaptic connections learning rates training and network experience ANNs have also been referred to as neurocomputers by people who want to preserve this analogy Expert Systems in Government Symposium, October 22-24, 1986, Tysons Westpark Hotel, McLean, Virginia Kamal N.
