Lancaster,2005-08-08 Concrete Vaulted Construction in Imperial Rome examines methods and techniques that enabled builders to construct some of the most imposing monuments of ancient Rome Focusing on structurally innovative vaulting and the factors that influenced its advancement Lynne Lancaster also explores a range of related practices including lightweight pumice as aggregate amphoras in vaults vaulting ribs metal tie bars and various techniques of buttressing She provides the geological background of the local building stones and applies mineralogical analysis to determine material provenance which in turn suggests trading patterns and land use Lancaster also examines construction techniques in relation to the social economic and political contexts of Rome in an effort to draw connections between changes in the building industry and the events that shaped Roman society from the early empire to late antiquity This book was awarded the James R Wiseman Book Award from the Archaeological Institute of America in 2007 Design of Reinforced Concrete Sections Under Bending and Axial Forces Helena Barros,Joaquim Figueiras,Carla Ferreira,Mário Pimentel,2022-01-03 This book contains auxiliary calculation tools to facilitate the safety assessment of reinforced concrete sections Essential parameters in the design to the ultimate limit state of resistance such as the percentage of reinforcement and the position of the neutral axis in concrete cross sections as well as the control of the maximum stresses in service limit states are provided by these tools A set of tables charts and diagrams used to design cross sections of reinforced and prestressed concrete structures are supplied The most current beams and columns cross sections namely rectangular circular and T sections are considered These tools have been prepared in line with the provisions of the new European regulations with particular reference to Eurocode 2 Design of Concrete Structures The book stands as an ideal learning
