Designs From Linear Codes Cunsheng Ding, 2018-08-24 This monograph aims to provide a well rounded and detailed account of designs using linear codes Most chapters of this monograph cover on the designs of linear codes A few chapters deal with designs obtained from linear codes in other ways Connections among ovals hyperovals maximal arcs ovoids linear codes and designs are also investigated This book consists of both classical results on designs from linear codes and recent results yet published by others This monograph is intended to be a reference for postgraduates and researchers who work on combinatorics or coding theory or digital communications or finite geometry

Classification Algorithms for Codes and Designs Petteri Kaski, Patric R.J. Östergård, 2006-02-03 A new starting point and a new method are requisite to insure a complete classification of the Steiner triple systems of order 15 This method was furnished and its tedious and difficult execution undertaken by Mr Cole F N Cole L D Cummings and H S White 1917 129 The history of classifying combinatorial objects is as old as the history of the objects themselves In the mid 19th century Kirkman Steiner and others became the fathers of modern combinatorics and their work on various objects including what became later known as Steiner triple systems led to several classification results Almost a century earlier in 1782 Euler 180 published some results on classifying small Latin squares but for the first few steps in this direction one should actually go at least as far back as ancient Greece and the proof that there are exactly five Platonic solids One of the most remarkable achievements in the early pre computer era is the classification of the Steiner triple systems of order 15 quoted above An onerous task that today no sensible person would attempt by hand calculation Because with the exception of occasional parameters for which combinatorial arguments are effective often to prove nonexistence or uniqueness classification in general is about algorithms and computation

Codes and Designs K. T. Arasu, Akos Seress, 2008-08-22 Following an initiative of the late Hans Zassenhaus in 1965 the Departments of Mathematics at The Ohio State University and Denison University organize conferences in combinatorics group theory and ring theory Between May 18 21 2000 the 25th conference of this series was held Usually there are twenty to thirty invited 20 minute talks in each of the three main areas However at the 2000 meeting the combinatorics part of the conference was extended to honor the 65th birthday of Professor Dijen Ray Chaudhuri This volume is the proceedings of this extension Most of the papers are in coding theory and design theory reflecting the major interest of Professor Ray Chaudhuri but there are articles on association schemes algebraic graph theory combinatorial geometry and network flows as well There are four surveys and seventeen research articles and all of these went through a thorough refereeing process The volume is primarily recommended for researchers and graduate students interested in new
