**Street Trees in Britain** Mark Johnston, 2017-07-31 The trees which line many of the streets in our towns and cities can often be regarded as part of a heritage landscape Despite the difficult conditions of an urban environment these trees may live for 100 years or more and represent living history in the midst of our modern streetscapes This is the first book on the history of Britain s street trees and it gives a highly readable authoritative and often amusing account of their story from the tree lined promenades of the seventeenth century to the majestic boulevards that grace some of our modern city centers The impact of the Victorian street tree movement is examined not only in the major cities but also in the rapidly developing suburbs that continued to expand through the twentieth century There are fascinating descriptions

of how street trees have helped to improve urban conditions in spa towns and seaside resorts and also in visionary initiatives such as the model villages garden cities garden suburbs and new towns While much of the book focuses on the social and cultural history of our street trees the last three chapters look at the practicalities of how these trees have been engineered into concrete landscapes This includes the many threats to street trees over the years such as pollution conflict with urban infrastructure pests and diseases and what is probably the greatest threat in recent times the dramatic growth in car ownership Street Trees in Britain will have particular appeal to those interested in heritage landscapes urban history and the natural and built environment Some of its themes were introduced in the author's previous work the widely acclaimed *Trees in Towns and Cities A History of British Urban Arboriculture* *Trees* Bob Watson, 2013-12-21 This book is an essential reference tool for all those who have a passion for trees as well as those who work in tree related professions whether they be garden managers forest and country park wardens foresters woodland managers or those working in the fields of arboriculture and horticulture Moreover this volume is also intended to be a textbook of trees aimed at arboriculture horticulture and forestry students studying at National Diploma and Higher National Diploma levels and for candidates of the Royal Horticultural Society's Diploma in Horticulture and the Society's Master of Horticulture RHS Award Other books in this field have tended to concentrate either on the science of trees or have specialized on their management culture or aesthetics This volume however is a comprehensive study that illustrates the relationship between all these subjects It considers the benefits of trees their classification and nomenclature all aspects of their biology and structure the identifying features of trees and their use in the landscape Covers woodlands woodland gardens and arboreta the management of individual trees and the harmless helpful and harmful agencies of trees including parasites fungi diseases and pests Examines the propagation systems of trees and shrubs the environment of tree roots and the planting establishment and support of trees Includes an extensive glossary of terms and concepts

**Tree Roots in the Built Environment** John Roberts, Nick Jackson, Mark Smith, Centre for Ecology and Hydrology (Great Britain), 2006-06-14 This publication sets out a comprehensive review of tree root biology and covers a broad range of practical issues that need to be considered in order to grow trees successfully in our towns and cities and to realise the significant benefits they provide in built environments Topics covered include soil condition and roots improving tree root growth in urban soils water supply and drought amelioration for amenity trees coping with soil contamination protecting trees during excavation and good trenching practice control of damage to tree roots on construction sites tree root damage to buildings and pavements sewers drains and pipes research needs and sustainability issues

**The Urban Tree** Duncan Goodwin, 2017-04-07 There is a growing evidence base that documents the social environmental and economic benefits that urban trees can deliver Trees are however under threat today as never before due to competition for space imposed by development other hard infrastructures increased pressure on the availability of financial provision from local authorities and a highly cautious approach to risk management in a modern

litigious society It is therefore incumbent upon all of us in construction and urban design disciplines to pursue a set of goals that not only preserve existing trees where we can but also ensure that new plantings are appropriately specified and detailed to enable their successful establishment and growth to productive maturity Aimed at developers urban planners urban designers landscape architects and arboriculturists this book takes a candid look at the benefits that trees provide alongside the threats that are eliminating them from our towns and cities It takes a simple applied approach that explores a combination of science and practical experience to help ensure a pragmatic and reasoned approach to decision making in terms of tree selection specification placement and establishment In this way trees can successfully be incorporated within our urban landscapes so that we can continue to reap the benefits they provide **The Tree Experts Mark**

Johnston,2021-08-02 Trees are now in the public eye as never before The threat of tree diseases the felling of street trees and the challenge of climate change are just some of the issues that have put trees in the media spotlight At the same time the trees in our parks gardens and streets are a vital resource that can deliver environmental social and economic benefits that make our towns and cities attractive green and healthy places Ever since Roman times when amenity trees were first planted in Britain caring for those trees has required specialist skills This is mainly because of the challenges of successfully integrating large trees into the urban environment and the risks involved in working with them often at height and in close proximity to people buildings and roads But who are the people with the specialist expertise to care for our amenity trees While professionals such as horticulturists landscape architects conservationists and foresters have a role to play it is the arboriculturists who are the tree experts For centuries arboriculture was often synonymous with forestry or considered an aspect of horticulture until it emerged in the nineteenth century as a separate discipline There are now some 22 000 people employed in Britain s arboricultural industry including practical tree surgeons and arborists local authority tree officers and arboricultural consultants This is the first book to trace the history of Britain s professional tree experts from the Roman arborator to the modern chartered arboriculturist It also discusses the influences from continental Europe and North America that have helped to shape British arboriculture over the centuries The Tree Experts will have particular appeal to those interested in the natural and built environment heritage landscapes social history and the history of gardening

Forest Monitoring ,2013-03-16 The demand for comparable long term high quality data on forest ecosystems status and changes is increasing at the international and global level Yet sources for such data are limited and in many case it is not possible to compare data from different monitoring initiatives across space and time because of methodological differences Apart from technical manuals there is no comprehensive multidisciplinary scientific peer reviewed reference for forest monitoring methods that can serve and support the user community This book provides in a single reference the state of the art of monitoring methods as applied at the international level The book present scientific concepts and methods that form the basis of the transnational long term forest monitoring in Europe and looks at other initiatives at the global level

Standardized methods that have been developed over two decades in international forest monitoring projects are presented. Emphasis is put on trans nationally harmonized methods related data quality issues current achievements and on remaining open questions. A comprehensive overview of needs requirements organization and possible outcomes of an integrated monitoring program. Tested and quality assured internationally harmonized methodologies based on a complete revision of existing methods carried out in 2009-2011. Connection with monitoring results allows assessment of the potential of the monitoring method.

**Forest Monitoring** Johannes Eichhorn, Peter Roskams, 2013-03-16 The assessment and evaluation of tree condition and vitality is an essential part of the ICP Forests monitoring programme. Due to the complex structure of forest ecosystems a number of different indicators of tree condition are adopted. In this chapter they are described also in terms of their ecological relevance. Special emphasis is laid on biotic agents affecting forest ecosystems and explaining tree responses to stressors. For operational reasons definitions and recommendations for the use of the indicators are given. Tree condition assessment in forest monitoring is closely linked to field measures of Quality Assurance and Control. Examples of results show that the methods currently used in tree condition monitoring are sensitive to detect the effects of climate change on forests and identifying main spatial and temporal patterns and damaging agents.

**Pesticides, Pollutants, Fertilizers, and Trees** J. R. Aldhous, 2000 This volume provides an account of the pesticides and fertilisers used in forestry today. Government regulations relating to the use of pesticides and fertilisers are included and safety and environmental aspects are discussed.
