**Lectures Notes on Advanced Structured Materials** Holm Altenbach, Michael Johlitz, Markus Merkel, Andreas Öchsner, 2022-12-02 The book on advanced structured materials is designed to facilitate teaching and informal discussion in a supportive and friendly environment The book provides a forum for postgraduate students to present their research results and train their presentation and discussion skills Furthermore it allows for extensive discussion of current research being conducted in the wider area of advanced structured materials Doing so it builds a wider postgraduate community and offers networking opportunities for early career researchers In addition to focused lectures the book provides specialized teaching overview lectures from experienced senior academics The 2022 Postgraduate Seminar entitled Advanced Structured Materials Development Manufacturing Characterization Applications was held from February 28th till March 4th 2022 in Malta The book that presented postgraduate lectures had a strong focus on polymer mechanics composite materials and additive manufacturing *Pressure-Actuated Cellular Structures for Adaptive Wingtips* Patrick Meyer, 2025-08-01 Aviation has a substantial environmental impact necessitating a shift towards more sustainability High aspect ratio HAR wings increase the efficiency of future transport aircraft by significantly reducing induced drag and consequently fuel consumption However the extended wingspan of HAR wings is accompanied by challenges including ground operations structural loads and aircraft control Folding wingtips FWTs address these challenges by incorporating a hinge at the outboard wing section enabling the wingtip to fold during ground operations or specific flight scenarios Wingtip actuators that allow active adjustment of the wingtip's cant angle and hinge stiffness can expand the potential operating modes of FWTs beyond the current state of the art Possible operating modes include extended load alleviation mission adaptability advanced flight control and active flutter suppression While most research on FWTs focuses on flight dynamics and aeroelasticity little attention has been given to the structural design of wingtip actuators This book introduces an actuator concept that transforms FWTs into multifunctional wingtip devices referred to as actuated adaptive wingtips The concept of actuated adaptive wingtips is based on a compliant morphing structure that adapts its mechanical properties by varying the fluid pressure in structure integrated chambers **Low Environmental Impact Polymers** Nick Tucker, Mark Johnson, 2004 In recent years the use of renewable resources as chemical feedstocks for the synthesis of polymeric materials has attracted considerable attention The reason for such activity is due to the finite nature of traditional petrochemical derived compounds

in addition to economic and environmental considerations Thus a key goal of the coming years will be the development of sustainable raw materials for the chemical industry that will replace current fossil based feedstocks The challenge for researchers is to develop natural and manmade synthetics that would reduce the emission of gases This book gives a thorough overview of the manufacture and uses of low environmental impact polymers This book will provide information for the experienced user of polymers wanting to use biodegradable materials and also be useful to designers specifiers end users and waste managers

*On the Time and Temperature Dependent Behaviour of Laminated Amorphous Polymers Subjected to Low-Velocity Impact* Andreas Rühl, 2017-04-05 The thesis investigates a polymeric laminate consisting of poly methyl methacrylate PMMA and thermoplastic polyurethane TPU experimentally and numerically with regard to its impact behaviour and applicability After a basic characterization of the monolithic materials PMMA TPU PMMA laminates were subjected to impact loadings at velocities up to 5 m/s using threepoint bending and dart impact tests Based on the experimental basis different material models for the Finite Element simulation are presented which are able to capture the time and temperature dependent behaviour of the laminate Final validation experiments consisting of head dummy impacts at 10 m/s on automotive side windows were conducted for PMMA and the laminate in order to investigate their applicability as glass substitution products
