Werkstoffprüfung mit Ultraschall Josef Krautkrämer, Herbert Krautkrämer, 2013-03-14 Die Lehre vom Schall die Akustik beschreibt die Vorgänge der mechanischen Schwingungen und ihre Ausbreitung in festen flüssigen oder gasförmigen Stoffen Im leeren Raum gibt es keinen Schall weil es die Materieteilchen selbst sind die schwingen im Gegensatz etwa zu den Lichtschwingungen oder Hochfrequenzschwingungen bei denen der elektrische und magnetische Zustand des Raumes an sich schwingt Durch eine Schallwelle in Luft wird ein kleines Luftvolumen aus seiner Ruhelage heraus hin und herbewegt während eine Lichtwelle den Bewegungszustand des Raumes nicht beeinflusst Unterscheidet man solche mechanischen Bewegungen in Materie die wenigstens eine zeitlang regelmäßig wiederkehren also periodisch sind durch die Anzahl der Perioden in der Sekunde voneinander so können wir einen Bereich abgrenzen in dem sich unser Ohr zum Nachweis eignet Wir hören den Schall wenn er durch die Luft oder unseren Körper an unser Ohr gelangt und wenn seine Frequenz weder zu tief noch zu hoch ist Unter etwa 10 Hz Hertz d.h. Schwingungen in der Sekunde hören wir keinen Ton auch nicht mehr über etwa 15000 bis 20000 Hz Das erstere ist allerdings nur dann richtig wenn es sich um eine sinusförmige Schwingung handelt Andere Formen zerlegt das Ohr in Obertöne wodurch die Schwingung als Ton oder Knallfolge hörbar wird hnlich wie man im Bereich der Lichtwellen die unserem Auge nicht mehr wahrnehmbaren höheren Frequenzen als Ultraviolett bezeichnet hat man die Schallwellen über 20000 Hz als Ultraschall abgegrenzt

Standards and Codes Guideline Saad Mahir, In the fields of work in industrial areas engineers and project implementers work to find the means to develop the work and complete it at the time indicated in an implementation plan and to avoid delays in the progress of the project for many reasons that we cannot summarize here for its bifurcation and relationship of activities with each other but we mention the most important reason at which the failure to follow the standard specifications of activities construction of the project by engineers or technicians These standards and codes are usually mentioned in their sources in the project documents The deviation from following the standards and codes leads to technical errors and consequently to the rework and addition of unwanted time to the project activity and when errors are repeated due to non compliance with international standards this will result in an accumulation of the unwanted time in the project ultimately leads to deviating the project plan
